The B.S. in Software Development program is designed to meet this growing need while preparing experienced information technology professionals for successful careers as software designers and developers.
Understanding the Competency-Based Approach

Practically speaking, how do competency-based programs like those offered at Western Governors University (WGU) work? Unlike traditional universities, WGU does not award degrees based on completion of a certain number of credit hours or a certain set of required courses. Instead, you will earn your degree by demonstrating your skills, knowledge, and understanding of important concepts.

Progress through a degree program is governed not by the amount of time you spend in class but by your ability to demonstrate mastery of competencies as you complete required courses. Of course, you will need to engage in learning experiences as you review competencies or develop knowledge and skills in areas in which you may be weak. To help you acquire the knowledge and skills you need to complete your courses and program, WGU provides a rich array of learning resources. Your program mentor will work closely with you to help you understand the competencies required for your program and to help you create a schedule for completing your courses. You will also work closely with course instructors as you engage in each of your courses. As subject matter experts, course instructors will guide you through the content you must master to pass the course assessments.

The benefit of this competency-based system is that enables students who are knowledgeable about a particular subject to make accelerated progress toward completing a degree, even if they lack college experience. You may have gained skills and knowledge of a subject while on the job, accumulated wisdom through years of life experience, or already taken a course on a particular subject. WGU will award your degree based on the skills and knowledge that you possess and can demonstrate—not the number of credits hours on your transcript.

Accreditation

Western Governors University is the only university in the history of American higher education to have earned accreditation from four regional accrediting commissions. WGU’s accreditation was awarded by (1) the Northwest Commission on Colleges and Universities, (2) the Higher Learning Commission of the North Central Association of Colleges and Schools, (3) the Accrediting Commission for Community and Junior Colleges of the Western Association of Schools and Colleges, and (4) the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges. The university’s accreditation status is now managed by the Northwest Commission on Colleges and Universities (NWCCU), which reaffirmed WGU’s accreditation in February 2017. The WGU Teachers College is accredited by the National Council for Accreditation of Teacher Education (NCATE). The nursing programs are accredited by the Commission on Collegiate Nursing Education (CCNE). The Health Information Management program is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM). The College of Business programs are accredited by the Accreditation Council for Business Schools and Programs (ACBSP).

The Degree Plan

The focus of your program is your personalized Degree Plan. The Degree Plan is a detailed blueprint of the courses you will need to complete in order to earn your degree. The Degree Plan also lays out the accompanying learning resources and assessments that compose your program. The list of courses in the Degree Plan is often referred to as the standard path. The amount of time it takes to complete your program depends on both the amount of new information you need to learn and the amount of time you plan to devote each week to study. Your program mentor and course instructors will help you assess
your strengths and development needs to establish a study plan.

Students vary widely in the specific skills and information they need to learn. For example, some students may be highly knowledgeable in a particular subject matter and would not need to engage in new learning opportunities. Other students may find that portions of the program require them to learn new information and that they need to take an online class or participate in a study module to acquire the knowledge and skills needed to fulfill program competencies in that area. Some individuals may be able to devote as little as 15–20 hours per week to the program, while others may need to devote more time. For this reason, pre-assessments are there to help your program mentor form a profile of your prior knowledge and create a personalized Degree Plan.

**How You Will Interact with Faculty**

At WGU, faculty serve in specialized roles, and they will work with you individually to provide the guidance, instruction, and support you will need to succeed and graduate. As a student, it is important for you to take advantage of this support. It is key to your progress and ultimate success.

Upon your enrollment, you will be assigned a program mentor—an expert in your field of study who will provide you with regular program-level guidance and support from the day you start until the day you graduate. Your program mentor will set up regular telephone appointments (weekly at first) with you, which you will be expected to keep. The mentor will review program competencies with you and work with you to develop a plan and schedule for your coursework. Your program mentor will serve as your main point of contact throughout your program—helping you set weekly study goals, recommending specific learning materials, telling you what to expect in courses, and keeping you motivated. In addition to regular calls, your program mentor is available to help you resolve questions and concerns as they arise.

You will also be assigned to a course instructor for each course. Course instructors are doctoral-level subject matter experts who will assist your learning in each individual course. When you begin a new course, your assigned course instructor will actively monitor your progress and will be in touch to offer one-on-one instruction and to provide you with information about webinars, cohort sessions, and other learning opportunities available to help you acquire the competencies you need to master the course. Your course instructor can discuss your learning for the course, help you find answers to content questions, and give you the tools to navigate the course successfully. In addition, you will communicate with course instructors by posting in the online learning community and participating in live discussion sessions such as webinars and cohorts.

For many of the courses at WGU, you will be required to complete performance assessments. These include reports, papers, presentations, and projects that let you demonstrate your mastery of the required competencies. A separate group of faculty members, called evaluators, will review your work to determine whether it meets requirements. Evaluators are also subject matter experts in their field of evaluation. If your assessment needs further work before it “passes,” these evaluators, who review your work anonymously, will provide you with instructional feedback to help you meet evaluation standards and allow you to advance.

**Connecting with Other Mentors and Fellow Students**
As you proceed through your Degree Plan, you will have direct contact with multiple faculty members. These communications can take a variety of forms, including participation in one-on-one discussions, chats in the learning communities, and live cohort and webinar opportunities. As a WGU student, you will have access to your own personal MyWGU Student Portal, which will provide a gateway to your courses of study, learning resources, and learning communities where you will interact with faculty and other students.

The learning resources in each course are specifically designed to support you as you develop competencies in preparation for your assessments. These learning resources may include reading materials, videos, tutorials, cohort opportunities, community discussions, and live discussions that are guided by course instructors who are experts in their field. You will access your program community during your orientation course to network with peers who are enrolled in your program and to receive continued support through professional enrichment and program-specific chats, blogs, and discussions. WGU also provides Student Services associates to help you and your program mentor solve any special problems that may arise.

Orientation

The WGU orientation course focuses on acquainting you with WGU’s competency-based model, distance education, technology, and other resources and tools available for students. You will also utilize WGU program and course communities, participate in activities, and get to know other students at WGU. The orientation course must be completed before you can start your first term at WGU.

Transferability of Prior College Coursework

Because WGU is a competency-based institution, it does not award degrees based on credits but rather on demonstration of competency. However, if you have completed college coursework at another accredited institution, or if you have completed industry certifications, you may have your transcripts and certifications evaluated to determine if you are eligible to receive some transfer credit. The guidelines for determining what credits will be granted varies based on the degree program. Students entering graduate programs must have their undergraduate degree verified before being admitted to WGU. To review more information in regards to transfer guidelines based on the different degree programs, you may visit the Student Handbook found at the link below and search for “Transfer Credit Evaluation.”

Click here for the Student Handbook

WGU does not waive any requirements based on a student’s professional experience and does not perform a "résumé review" or "portfolio review" that will automatically waive any degree requirements. Degree requirements and transferability rules are subject to change in order to keep the degree content relevant and current.

Remember, WGU’s competency-based approach lets you take advantage of your knowledge and skills, regardless of how you obtained them. Even when you do not directly receive credit, the knowledge you possess may help you accelerate the time it takes to complete your degree program.

Continuous Enrollment, On Time Progress, and Satisfactory Academic Progress

WGU is a “continuous enrollment” institution, which means you will be automatically enrolled in each of
your new terms while you are at WGU. Each term is six months long. Longer terms and continuous enrollment allow you to focus on your studies without the hassle of unnatural breaks between terms that you would experience at a more traditional university. At the end of every six-month term, you and your program mentor will review the progress you have made and revise your Degree Plan for your next six-month term.

WGU requires that students make measurable progress toward the completion of their degree programs every term. We call this “On-Time Progress,” denoting that you are on track and making progress toward on-time graduation. As full-time students, graduate students must enroll in at least 8 competency units each term, and undergraduate students must enroll in at least 12 competency units each term. Completing at least these minimum enrollments is essential to On-Time Progress and serves as a baseline from which you may accelerate your program. We measure your progress based on the courses you are able to pass, not on your accumulation of credit hours or course grades. Every time you pass a course, you are demonstrating that you have mastered skills and knowledge in your degree program. For comparison to traditional grading systems, passing a course means you have demonstrated competency equivalent to a “B” grade or better.

WGU assigns competency units to each course in order to track your progress through the program. A competency unit is equivalent to one semester credit of learning. Some courses may be assigned 3 competency units while others may be as large as 12 competency units.

Satisfactory Academic Progress (SAP) is particularly important to students on financial aid because you must achieve SAP in order to maintain eligibility for financial aid. We will measure your SAP quantitatively by reviewing the number of competency units you have completed each term. In order to remain in good academic standing, you must complete at least 66.67% of the units you attempt over the length of your program—including any courses you add to your term to accelerate your progress. Additionally, during your first term at WGU you must pass at least 3 competency units in order to remain eligible for financial aid. We know that SAP is complex, so please contact a financial aid counselor should you have additional questions. *Please note: The Endorsement Preparation Program in Educational Leadership is not eligible for federal financial aid.

**Courses**

Your Degree Plan includes courses needed to complete your program. To obtain your degree, you will be required to demonstrate your skills and knowledge by completing the assessment(s) for each course. In general there are two types of assessments: performance assessments and objective assessments. Performance assessments contain, in most cases, multiple scored tasks such as projects, essays, and research papers. Objective assessments include multiple-choice items, multiple-selection items, matching, short answer, drag-and-drop, and point-and-click item types, as well as case study and video-based items. Certifications verified through third parties may also be included in your program. More detailed information about each assessment is provided in each course of study.

**Learning Resources**

WGU works with many different educational partners, including enterprises, publishers, training companies, and higher educational institutions, to provide high-quality and effective learning resources that match the competencies you are developing. These vary in type, and may be combined to create
the best learning experience for your course. A learning resource can be an e-textbook, online module, study guide, simulation, virtual lab, tutorial, or a combination of these. The cost of most learning resources are included in your tuition and Learning Resource Fee. They can be accessed or enrolled for through your courses. Some degree-specific resources are not covered by your tuition, and you will need to cover those costs separately. WGU also provides a robust library to help you obtain additional learning resources, as needed.

Mobile Compatibility:

The following article provides additional details about the current state of mobile compatibility for learning resources at WGU. It includes a list that can be referenced to determine the mobile friendliness of all core course materials used in a program.

Student Handbook article: Can I use my mobile device for learning resources?

Standard Path

As previously mentioned, competency units (CUs) have been assigned to each course in order to measure your academic progress. If you are an undergraduate student, you will be expected to enroll in a minimum of 12 competency units each term. Graduate students are expected to enroll in a minimum of 8 competency units each term. A standard plan for a student for this program who entered WGU without any transfer units would look similar to the one on the following page. Your personal progress can be faster, but your pace will be determined by the extent of your transfer units, your time commitment, and your determination to proceed at a faster rate.

Tracks

This program is presented in two tracks. One emphasizing the Java programming language and the other one emphasizing C#. Both programs have the same outcomes and focus on software application development and not the language itself. In addition to the language of emphasis both programs cover pseudo code, C++, and SQL. Students can only switch between tracks at the beginning of a term. Guidelines allow for credit transfer between two identical courses in the different tracks. Courses focused on the language of emphasis (i.e Java or C#) do not provide transfer credit between the two tracks.

**Changes to Curriculum**

WGU publishes an Institutional Catalog, which describes the academic requirements of each degree program. Although students are required to complete the program version current at the time of their enrollment, WGU may modify requirements and course offerings within that version of the program to maintain the currency and relevance of WGU’s competencies and programs. As these changes are implemented, WGU will ensure that the length of the student’s degree program (i.e., total competency unit requirements) will not increase and that competency units already earned will be applied to the updated program version. When program requirements are updated, students readmitting after withdrawal from the university will be expected to re-enter into the most current catalog version of the program.
Areas of Study for Bachelor of Science, Software Development

The following section includes the areas of study in the program, with their associated courses. Your specific learning resources and level of instructional support will vary based on the individual competencies you bring to the program and your confidence in developing the knowledge, skills, and abilities required in each area of the degree. The Degree Plan and learning resources are dynamic, so you need to review your Degree Plan and seek the advice of your mentor regarding the resources before you purchase them.

IT Fundamentals

Introduction to IT
Introduction to IT examines information technology as a discipline and the various roles and functions of the IT department as business support. Students are presented with various IT disciplines including systems and services, network and security, scripting and programming, data management, and business of IT, with a survey of technologies in every area and how they relate to each other and to the business.

This course covers the following competencies:

- The graduate describes the structure, function, and security associated with networks.
- The graduate explains the structure and function of databases.
- The graduate describes IT as a discipline and discusses the history and future of computing as well as the currently used infrastructure.
- The graduate explains the role of technology in today’s business environment and describes basic concepts of project management.
- The graduate identifies common software architectures, development techniques, and the relationship between software and its environment.
- The graduate describes information technology systems and their role in converting data to organizational knowledge.
- The graduate identifies the role of different types of software in a computing environment and explains the fundamentals of software development.
- The graduate evaluates ethical concerns involved in the use of technology.
- The graduate recognizes and describes functions of basic computer hardware components.

IT Foundations
IT Foundations is the first course in a two-part series preparatory for the CompTIA A+ exam, Part I. Students will gain an understanding of personal computer components and their functions in a desktop system, as well as computer data storage and retrieval; classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers, laptops, portable devices, operating systems, networks, and system security; recommending appropriate tools, diagnostic procedures, preventative maintenance and troubleshooting techniques for personal computer components in a desktop system; strategies for identifying, preventing, and reporting safety hazards and environmental/human accidents in a technological environments; and effective communication with colleagues and clients as well as job-related professional behavior.

This course covers the following competencies:

- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, and upgrading basic network types.
- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting laptops and mobile devices.
The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers.

The graduate demonstrates an understanding of personal computer components and their function in a desktop system.

The graduate demonstrates a basic working knowledge of computer data storage and information retrieval.

**IT Applications**

IT Applications is a continuation of the IT Foundations course preparatory for the CompTIA A+ exam, Part II. Students will gain an understanding of personal computer components and their functions in a desktop system. Also covered is computer data storage and retrieval, including classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers, laptops, portable devices, operating systems, networks, and system security. Other areas include recommending appropriate tools, diagnostic procedures, preventative maintenance and troubleshooting techniques for personal computer components in a desktop system. The course then finished with strategies for identifying, preventing, and reporting safety hazards and environmental/human accidents in a technological environments, and effective communication with colleagues and clients as well as job-related professional behavior.

This course covers the following competencies:

- The graduate recommends appropriate strategies for classifying, controlling access, setting permission, configuring, optimizing, and upgrading basic system security.
- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting laptops, tablets, and mobile devices.
- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting computer operating systems.
- The graduate recommends appropriate tools, diagnostic procedures, preventive maintenance, and troubleshooting techniques for personal computer components in a desktop system.

**General Education**

**Critical Thinking and Logic**

Reasoning and Problem Solving helps students internalize a systematic process for exploring issues that takes them beyond an unexamined point of view and encourages them to become more self-aware thinkers by applying principles of problem identification and clarification, planning and information gathering, identifying assumptions and values, analysis and interpretation of information and data, reaching well-founded conclusions, and identifying the role of critical thinking in the disciplines and professions.

This course covers the following competencies:

- The graduate recognizes the value of critical thinking in identifying and understanding the underlying structures of the disciplines and professions.
- The graduate evaluates different sources representing a range of perspectives on a problem in order to weigh the implications and consequences of different solutions to the problem.
- The graduate synthesizes information to understand a problem’s complexities and potential solutions, and then evaluates the reasoning and evidence in support of these different solutions.
- The graduate identifies internal and external biases and assumptions related to a problem, and evaluates the influence and validity of these biases and assumptions.
- The graduate logically brings together information to arrive at a viable solution to a problem, and then clearly and accurately communicates the results.
- The graduate analyzes open-ended problems by learning about the problem and evaluating the accuracy and relevance of different perspectives on the problem.
Introduction to Communication
This introductory communication course allows students to become familiar with the fundamental communication theories and practices necessary to engage in healthy professional and personal relationships. Students will survey human communication on multiple levels and critically apply the theoretical grounding of the course to interpersonal, intercultural, small group, and public presentational contexts. The course also encourages students to consider the influence of language, perception, culture, and media on their daily communicative interactions. In addition to theory, students will engage in the application of effective communication skills through systematically preparing and delivering an oral presentation. By practicing these fundamental skills in human communication, students become more competent communicators as they develop more flexible, useful, and discriminatory communicative practices in a variety of contexts.

This course covers the following competencies:
- The graduate applies foundational elements of effective communication.
- The graduate applies appropriate communication strategies in interpersonal and group contexts
- The graduate utilizes appropriate presentational communication strategies in personal and professional settings.

English Composition I
English Composition I introduces learners to the types of writing and thinking that are valued in college and beyond. Students will practice writing in several genres with emphasis placed on writing and revising academic arguments. Instruction and exercises in grammar, mechanics, research documentation, and style are paired with each module so that writers can practice these skills as necessary.

Comp I is a foundational course designed to help students prepare for success at the college level. There are no prerequisites for English Composition I.

This course covers the following competencies:
- The graduate integrates credible and relevant sources into written arguments.
- The graduate uses appropriate writing and revision strategies
- The graduate composes an appropriate argumentative essay for a given context.
- The graduate composes an appropriate narrative for a given context.
- The graduate appropriately uses a given writing style.
- The graduate selects appropriate rhetorical strategies that improve writing and argumentation.
- The graduate applies appropriate grammatical rules, sentence structure, and writing conventions.

American Politics and the US Constitution
American Politics and the US Constitution examines the evolution of representative government in the United States and the changing interpretations of the civil rights and civil liberties protected by the Constitution. This course will give students an understanding of the powers of the branches of the federal government, the continual tensions inherent in a federal system, the shifting relationship between state and federal governments, and interactions between elected officials and the ever-changing electorate. This course will focus on such topics as the role of a free press in a democracy, the impact of changing demographics on American politics, and the debates over and expansion of civil rights. Upon completion of the course, students should be able to explain the basic functions of the federal government, describe the forces that shape American policy and politics, and be better prepared to participate in America’s civic institutions. This course has no prerequisite.

This course covers the following competencies:
- The graduate explains how the structure and powers of the United States government interact to form public policy.
- The graduate examines the struggle to balance individual liberty, public order, and state’s rights.
- The graduate describes the influence of competing political ideologies on the development of the United States government.
The graduate examines the influence of the media, public opinion, and political discourse on American democracy.

Introduction to Humanities
This introductory humanities course allows students to practice essential writing, communication, and critical thinking skills necessary to engage in civic and professional interactions as mature, informed adults. Whether through studying literature, visual and performing arts, or philosophy, all humanities courses stress the need to form reasoned, analytical, and articulate responses to cultural and creative works. Studying a wide variety of creative works allows students to more effectively enter the global community with a broad and enlightened perspective.

This course covers the following competencies:

- The graduate analyzes the primary contributions and characteristics of humanities during the Classical period.
- The graduate analyzes the primary contributions and characteristics of humanities during the Romantic period.
- The graduate assesses the development of humans through the study of key concepts, disciplines, and primary influences of the humanities.
- The graduate analyzes the primary contributions and characteristics of humanities during the Renaissance.
- The graduate analyzes the primary contributions and characteristics of humanities within the Neoclassical and Enlightenment period.
- The graduate analyzes the primary contributions and characteristics of humanities during the Realist movement.

Introduction to Geography
This course will discuss geographic concepts, places and regions, physical and human systems and the environment.

This course covers the following competencies:

- The graduate can describe and discuss fundamental concepts in geography.
- The graduate can describe and discuss environment.
- The graduate can describe and discuss human systems.
- The graduate can describe and discuss physical systems.
- The graduate can describe and discuss places and regions.

Ethics in Technology
Ethics in Technology examines the ethical considerations of technology in each of four categories: privacy, accuracy, property, and access. The course presents a range of technologies and issues that challenge technologists in the field of information ethics. Students are introduced to a decision-making process as informed by ethical frameworks that outline key ethical considerations within the technologies presented. Students will study specific cases to help inform their professional responsibilities in how to navigate the important controversies in topics such as surveillance, social media, hacking, data manipulation, plagiarism and piracy, artificial intelligence, responsible innovation, and the digital divide. This course has no prerequisites.

This course covers the following competencies:

- The graduate explains how IT professionals address ethical challenges regarding data property.
- The graduate explains the role of ethical principles (i.e. theories, concepts, frameworks) in ethical decision-making in the information age.
- The graduate explains how IT professionals address ethical challenges regarding data access.
- The graduate explains how IT professionals address the role of professionals standards and codes of conduct in ethical
decision-making.

- The graduate explains how IT professionals address ethical challenges regarding data accuracy.
- The graduate explains how IT professionals address ethical challenges regarding data privacy.

Applied Probability and Statistics

Applied Probability and Statistics is designed to help students develop competence in the fundamental concepts of basic statistics including: introductory algebra and graphing; descriptive statistics; regression and correlation; and probability. Statistical data and probability are often used in everyday life, science, business, information technology, and educational settings to make informed decisions about the validity of studies and the effect of data on decisions. This course discusses what constitutes sound research design and how to appropriately model phenomena using statistical data. Additionally, the content covers simple probability calculations, based on events that occur in the business and IT industries. No prerequisites are required for this course.

This course covers the following competencies:

- The graduate applies the operations, processes, and procedures of basic algebra to evaluate quantitative expressions, and to solve equations and inequalities.
- The graduate applies principles and methods of probability-based mathematics to explain and solve problems.
- The graduate applies the operations, processes, and procedures of fractions, decimals, and percentages to evaluate quantitative expressions.
- The graduate evaluates the relationship between two quantitative variables through correlation and regression.
- The graduate evaluates the relationship between two variables through interpretation of visual displays and numerical measures.
- The graduate evaluates categorical and quantitative data pertaining to a single variable using appropriate graphical displays and numerical measures.

Applied Algebra

Applied Algebra is designed to help you develop competence in working with functions, the algebra of functions, and using some applied properties of functions. You will start learning about how we can apply different kinds of functions to relevant, real-life examples. From there, the algebra of several families of functions will be explored, including linear, polynomial, exponential, and logistic functions. You will also learn about relevant, applicable mathematical properties of each family of functions, including rate of change, concavity, maximizing/minimizing, and asymptotes. These properties will be used to solve problems related to your major and make sense of everyday living problems. Students should complete Applied Probability and Statistics or its equivalent prior to engaging in Applied Algebra.

This course covers the following competencies:

- The graduate applies exponential functions and their properties to real-world problems.
- The graduate verifies the validity of a given model.
- The graduate analyzes graphical depictions of real-world situations using functional properties.
- The graduate interprets the real-world meaning of various functions based on notation, graphical representations, and data representations.
- The graduate applies linear functions and their properties to real-world problems.
- The graduate applies polynomial functions and their properties to real-world problems.
- The graduate applies logistic functions and their properties to real-world problems.

General Science Content
Integrated Physical Sciences
This course provides students with an overview of the basic principles and unifying ideas of the physical sciences: physics, chemistry, and Earth sciences. Course materials focus on scientific reasoning and practical and everyday applications of physical science concepts to help students integrate conceptual knowledge with practical skills.

This course covers the following competencies:

- The graduate describes the underlying organization, interactions, and processes within the Earth system including the Earth's structure and atmosphere, and Earth's interactions within the solar system.
- The graduate describes the nature and process of science.
- The graduate examines applications of physics including fundamental concepts such as forces, motion, energy, and waves.
- The graduate examines applications of key chemistry concepts including the structure of matter and the behavior and conservation of matter in chemical reactions.

Scripting and Programming

Scripting and Programming - Foundations
Scripting and Programming - Foundations provides an introduction to programming, covering basic elements such as variables, data types, flow control, and design concepts. The course is language-agnostic in nature, ending in a survey of languages and introduces the distinction between interpreted and compiled languages. There are no prerequisites for this course.

This course covers the following competencies:

- The graduate examines basic computer programming elements, including data types, constants, variables, operators, and expressions.
- The graduate compares various scripting and programming languages.
- The graduate interprets algorithms.
- The graduate describes steps of the software design process.
- The graduate determines how to achieve programming goals through functions and control structure.

Web Development

Web Development Foundations
This course prepares students for the CIW Site Development Associate certification. The course introduces students to web design and development by presenting them with HTML5 and CSS, the foundational languages of the web, by reviewing media strategies, and by using tools and techniques commonly employed in web development.

This course covers the following competencies:

- The graduate develops a plan for creating and maintaining a website that addresses specific business needs while maintaining industry and ethical standards.
- The graduate creates web pages using a GUI editor as well as basic HTML5 and CSS 3 elements.

Web Development Applications
This course prepares students for the CIW Advanced HTML5 and CSS3 Specialist certification exam. This course builds upon a student's manual coding skills by teaching how to develop web documents and pages using the Web Development Trifecta: HTML5 (Hypertext Markup Language version 5) and CSS3 (Cascading Style Sheets version 3) and JavaScript. Students will utilize the skills learned in this course to create web documents and pages that easily adapt to display on...
both traditional and mobile devices. In addition, students will learn techniques for code validation and testing, form creation, inline form field validation, and mobile design for browsers and apps, including Responsive Web Design (RWD).

This course covers the following competencies:

- The graduate uses JavaScript to enhance web development and design.
- The graduate develops web pages tested for compatibility between traditional and mobile devices.
- The graduate validates user input forms using both HTML5 and JavaScript techniques.
- The graduate assembles web pages by using, creating, and validating HTML5 code.
- The graduate develops web documents using CSS3 to position and format content, to enhance accessibility, and to create effects such as transformations, transitions, and animations.
- The graduate improves the functionality of web pages using HTML5 APIs to add features such as geolocation, drag-and-drop, canvas, and offline web applications.

User Interface Design

This course covers tools and techniques employed in user interface design including web and mobile applications. Concepts of clarity, usability and detectability are included in this course as well as other design elements such as color schemes, typography, and layout. Techniques like wireframing, usability testing, and SEO optimization are also covered. This course prepares students for the CIW User Interface Designer certification.

This course covers the following competencies:

- The graduate explains user interface design principles.
- The graduate explains the relationship between the user and the site design.
- The graduate builds a web page wireframe.
- The graduate creates multiple web pages, using best practices in design technique.
- The graduate analyzes best practices in designing interactive elements of User Interfaces.
- The graduate explains the best practice strategies for maintaining websites, including Search Engine Optimization.
- The graduate describes user interface design project constructs.
- The graduate creates a navigation hierarchy for a website.
- The graduate describes the user interface design process.

Network and Security

Network and Security - Foundations

Network and Security - Foundations introduces students to the components of a computer network and the concept and role of communication protocols. The course covers widely used categorical classifications of networks (e.g., LAN, MAN, WAN, WLAN, PAN, SAN, CAN, and VPN) as well as network topologies, physical devices, and layered abstraction. The course also introduces students to basic concepts of security covering vulnerabilities of networks and mitigation techniques, security of physical media, and security policies and procedures. This course has no prerequisites.

This course covers the following competencies:

- The graduate identifies network security concepts to support security practices within an organization.
- The graduate determines appropriate network security operations to protect an organization’s assets and networks.
- The graduate identifies core networking concepts to support networking operations within an organization.

Business of IT
Business of IT - Project Management
In this course, students will build on industry standard concepts, techniques, and processes to develop a comprehensive foundation for project management activities. During a project’s life cycle, students will develop the critical skills necessary to initiate, plan, execute, monitor, control, and close a project. Students will apply best practices in areas such as scope management, resource allocation, project planning, project scheduling, quality control, risk management, performance measurement, and project reporting. This course prepares students for the following certification exam: CompTIA Project+.

This course covers the following competencies:
- The graduate determines project tools and documentation methods to measure and monitor project performance.
- The graduate applies communication methods and change control processes to maintain clarity of project plans, activities, and changes for stakeholders.
- The graduate determines the impact of project constraints and influences to manage risk.
- The graduate applies key project management processes to guide business initiatives.

Business of IT - Applications
Business of IT – Applications examines Information Technology Infrastructure Library (ITIL®) terminology, structure, policies, and concepts. Focusing on the management of Information Technology (IT) infrastructure, development, and operations, students will explore the core principles of ITIL practices for service management to prepare them for careers as IT professionals, business managers, and business process owners. This course has no prerequisites.

This course covers the following competencies:
- The graduate analyzes service management processes and the process model in order to effectively deliver IT services to customers.
- The graduate describes the various processes central to IT service management in order to contextualize each process within an organization’s overarching service management approach.
- The graduate analyzes how the ITIL Service Lifecycle’s integrated approach provides value to organizations in order to work effectively on IT teams.
- The graduate describes the service desk function, the technical management function, the application management function, and the IT operations management function in order to contextualize each function within an organization’s overarching service management approach.
- The graduate deconstructs service management, service design, and continual service improvement in order to optimize service value for customers and organizations.
- The graduate analyzes how different roles and responsible, accountable, consulted, and informed characterizations work together in order to understand the opportunities and constraints the graduate is likely to experience when working on teams in a service management workplace.
- The graduate articulates service management concepts with ITIL vocabulary in order to effectively communicate about IT service management in the workplace.

Software

Scripting and Programming - Applications
Scripting and Programming - Applications for undergraduates explores the various aspects of the C++ programming language by examining its syntax, the development environment, and tools and techniques to solve some real-world problems.

This course covers the following competencies:
- The graduate writes code that implements decision and loop constructs to control the flow of a program.
● The graduate applies pointers to solve complex problems.
● The graduate applies object-oriented programming concepts in order to create a basic application.
● The graduate applies fundamental programming concepts in a specific programming environment.
● The graduate prepares code which declares, initializes, and assigns values to variables of appropriate types as part of the application development process.
● The graduate creates arrays in order to solve complex problems.
● The graduate writes code that creates and manipulates functions and files.

Software Engineering

This course introduces the concepts of software engineering to students who have completed the core courses in programming and project management. The principles build on previously acquired concepts, switching the emphasis from programming simple routines, to engineering robust and scalable software solutions. This course does not cover programming, but provides an overview of software engineering processes, and their challenging nature focusing on the need for a disciplined approach to software engineering. A generic process framework provides the groundwork for formal process models. Prescriptive process models such as the Waterfall Model and Agile Development are included. An introduction to the elements and phases of software engineering is included which explores requirements engineering, design concepts, and software quality.

This course covers the following competencies:

● The graduate applies software engineering core principles, the generic process framework, and introductory software engineering concepts to a software project.
● The graduate interprets requirements refined through the software engineering process.
● The graduate designs requirements-based software solutions using software engineering design concepts and patterns.
● The graduate recommends a software engineering process model for a project.
● The graduate integrates software quality testing and assurance throughout the software development process.

Software I (In language track: Java or C#)

Software I builds object-oriented programming expertise and introduces powerful new tools for Java application development. You will learn about and put into action class design, exception handling, and other object-oriented principles and constructs to develop software that meets business requirements. This course requires foundational knowledge of object-oriented programming.

This course covers the following competencies:

● The graduate incorporates simple exception handling in application development for improving user experience and application stability.
● The graduate develops user interfaces to meet project requirements.
● The graduate produces applications using high-level programming language constructs to meet business requirements.
● The graduate implements object-oriented design principles (e.g., inheritance, encapsulation, and abstraction) in developing applications for ensuring the application’s scalability.
● The graduate designs software solutions with appropriate classes, objects, methods, and interfaces to achieve specific goals.

User Experience Design

User Experience Design explores multiple tools and techniques used in user experience design. Students are presented
with an in-depth view of activities involved in the design of user experience and have the opportunity to create several deliverables including persona profiles, information architectures, and prototypes of different levels of fidelity. In addition, the course also covers usability testing and the evaluation of quantitative and qualitative data derived from these and other experiments.

This course covers the following competencies:

- The graduate establishes user experience design processes as part of solution development.
- The graduate conducts usability testing for gathering actionable feedback applicable to user-centered design.
- The graduate evaluates qualitative and quantitative data from UX design experiments for improving the user experience.
- The graduate designs user-centered experiences using industry standard UX design tools and techniques.

Software II - Advanced Java Concepts (In language track: Java or C#)

Software II – Advanced Java Concepts refines object-oriented programming expertise and builds database and file server application development skills. You will learn about and put into action lambda expressions, collections, input/output, advanced error handling, and the newest features of Java 8 to develop software that meets business requirements. This course requires intermediate expertise in object-oriented programming and the Java language.

This course covers the following competencies:

- The graduate incorporates lambda expressions in application development to meet business requirements more efficiently.
- The graduate produces database and file server applications using advanced constructs in a high-level programming language to meet business requirements.
- The graduate applies the localization API and date/time API in application development to support end-users in various geographical regions.
- The graduate incorporates advanced exception control mechanisms in application development for improving user experience and application stability.
- The graduate incorporates streams and filters in application development to manipulate data more efficiently.

Software Quality Assurance

Software Quality Assurance applies a QA focus to every phase of the software development life cycle. This course investigates best practices for quality analysis, quality planning, and testing strategies as they pertain to the everyday practice of software development. Students will come to understand how their work fits into the bigger picture: how QA, testing, and code-writing practices interact within specific process models; the potential impact of new code on existing code or on other applications; the importance of usability and the influence users have on the ultimate success of an application. Students will explore test plans, test cases, unit tests, integration tests, regression tests, usability tests, and test and review tools.

This course covers the following competencies:

- The graduate recognizes the impact of different types of tests on the software development process in the context of quality-centered software development.
- The graduate uses test and review tools to uncover flaws or weaknesses in code.
- The graduate conducts unit tests to validate code.
- The graduate integrates quality best practices throughout the software development life cycle to improve the quality of code.

Technical Communication
Technical Communication
This course covers basic elements of technical communication, including professional written communication proficiency; the ability to strategize approaches for differing audiences; and technical style, grammar, and syntax proficiency.

This course covers the following competencies:
- The graduate creates various technically written artifacts using appropriate technical communication concepts.
- The graduate makes strategic and appropriate communication decisions based on the audience.
- The graduate integrates basic elements of professional discourse, including audience analysis, the writing process, correct grammar, and appropriate design elements, into technical communication artifacts.

Data Management

Data Management - Foundations
This course introduces students to the concepts and terminology used in the field of data management. They will be introduced to Structured Query Language (SQL) and will learn how to use Data Definition Language (DDL) and Data Manipulation Language (DML) commands to define, retrieve, and manipulate data. This course covers differentiations of data—structured vs. unstructured and quasi-structured (relational, hierarchical, XML, textual, visual, etc); it also covers aspects of data management (quality, policy, storage methodologies). Foundational concepts of data security are included.

This course covers the following competencies:
- The graduate explains how data, databases, and data management are used in today’s organizations.
- The graduate analyzes the relational model of data.
- The graduate interprets the concepts of analytical processing within the context of business intelligence.
- The graduate implements SQL concepts and coding.
- The graduate demonstrates appropriate strategies to normalize data.
- The graduate demonstrates an understanding of the concepts involved in the modeling of data.

Data Management - Applications
This course covers conceptual data modeling and provides an introduction to MySQL. Students will learn how to create simple to complex SELECT queries including subqueries and joins, and will also learn how to use SQL to update and delete data. Topics covered in this course include exposure to MySQL; developing physical schemas; creating and modifying databases, tables, views, foreign keys/primary keys (FKs/PKs), and indexes; populating tables; and developing simple Select-From-Where (SFW) queries to complex 3+ table join queries.

This course covers the following competencies:
- The graduate creates conceptual data models and translates them into physical schemas.
- The graduate writes code to create and modify tables and views employing SQL Data Definition Language (DDL) in MySQL environment.
- The graduate creates simple Select-From-Where (SFW) and complex 3+ table join queries with Data Manipulation Language (DML) in MySQL environment.
- The graduate populates tables with insert, update, and delete using DML in MySQL environment.
- The graduate creates databases utilizing SQL Data Definition Language (DDL) in MySQL environment.
- The graduate writes code to create and modify Primary Keys (PKs) and Foreign Keys (FKs) and Indexes with SQL Data Definition Language (DDL) in MySQL environment.

Operating Systems
Operating Systems for Programmers
This course covers operating systems from the perspective of a programmer including the placement of the operating system in the layered application development model. Primarily OSs provide Memory Management, Task Scheduling, and CPU allocation. Secondarily, OSs provide tools for file storage/access, permission control, event handling, network access, and cross-process interaction. OSs also provide tools for debugging problems within a single process or within groups of programs.

This course covers the following competencies:

- The graduate describes operating systems, their functions, and their structure.
- The graduate describes different file systems and I/O algorithms.
- The graduate describes mechanisms used by the operating system for protection and security and how they relate to software applications.
- The graduate describes processes and threads and their relationship to multithreading and parallel programming.
- The graduate explains the different approaches to memory management and how they affect CPU utilization.

Leadership and Management

Organizational Behavior and Leadership
Organizational Behavior and Leadership explores how to lead and manage effectively in diverse business environments. The course requires students to demonstrate the ability to apply organizational leadership theories and management strategies in a series of scenario-based problems.

This course covers the following competencies:

- The graduate can describe the effects of specified influences on individual behavior.
- The graduate can analyze leadership theories, methods, and tools in given situations and select the appropriate behavior of the leader.
- The graduate can develop and recommend how to implement effective performance evaluation processes.
- The graduate can determine which type of team and team leadership should be used to accomplish a task or project.
- The graduate analyzes the culture within an organization to determine how to work effectively within that organization.
- The graduate can recommend appropriate principles or techniques for guiding the development of a group.

Software Applications

Mobile Application Development (In language track: Java or C#)
This course introduces students to programming for mobile devices using a Software Development Kit (SDK). Students with previous knowledge of programming will learn how to install and utilize a SDK, build a basic mobile application, build a mobile applications using a graphical user interface(GUI), adapt applications to different mobile devices, save data, execute and debug mobile applications using emulators, and deploy a mobile application.

This course covers the following competencies:

- The graduate explains ways to save data in a mobile application, and creates a data base in a mobile application.
- The graduate explains how to share information in mobile applications and creates a user-defined content provider.
- The graduate creates a user interface and describes how to handle user input.
- The graduate describes how to utilize the available hardware and services available in different devices.
- The graduate describes the Activity lifecycle in the mobile application, and creates and links an activity.
The graduate explains mobile development, develops a simple mobile application using the IDE, documents debugging the mobile application, and describes how to use an emulator.

The graduate describes mobile application deployment and prepares and application for deployment.

Data Manipulation

Structured Query Language
This course prepares the student for the Oracle Database SQL (1Z0-071) certification exam. Students will master the SQL language that will allow them to restrict and sort data, create schema objects, control user access, and manage data, objects and tables.

This course covers the following competencies:

- The graduate performs advanced operations in the creation and management of schema objects.
- The graduate describes the foundational elements of Oracle SQL.
- The graduate implements advanced functions.
- The graduate creates advanced queries.
- The graduate implements secure rights and privileges for user access.

Capstone

Software Development Capstone
The capstone assessment challenges students to demonstrate mastery of all the BSITSW program outcomes. Students will develop a software application to solve a problem of their choice constrained only by the technology requirements provided in the assessment DRF.

This course covers the following competencies:

- The graduate integrates and synthesizes competencies from across the degree program, thereby demonstrating the ability to participate in and contribute value to the chosen professional field.
Need More Information? WGU Student Services

WGU’s Student Services team is dedicated exclusively to helping you achieve your academic goals. The Student Services office is available during extended hours to assist with general questions and administrative or accessibility issues. The Student Services team members help you resolve issues, listen to student issues and concerns, and make recommendations for improving policy and practice based on student feedback. The Student Services team provides a formal means by which you can express your views, which in turn will inform the decisions we make.

Student Services team members also assist with unresolved concerns to find equitable resolutions. To contact the Student Services team, please feel free to call 877-435-7948 or e-mail studentservices@wgu.edu. We are available Monday through Friday from 6:00 a.m. to 10:00 p.m., Saturday from 7:00 a.m. to 7:00 p.m., mountain standard time. Closed Sundays.

If you have inquiries or concerns that require technical support, please contact the WGU IT Service Desk. The IT Service Desk is available Monday through Friday, 6:00 a.m. to 10:00 p.m. and Saturday and Sunday, 10:00 a.m. to 7:00 p.m., mountain standard time. To contact the IT Service Desk, please call 1-877-HELP-WGU (877-435-7948) or e-mail servicedesk@wgu.edu. The support teams are generally closed in observance of university holidays.

For the most current information regarding WGU support services, please visit “Student Support” on the Student Portal at http://my.wgu.edu.
