The B.S. in Software Development program is designed to meet this growing need while preparing experienced information technology professionals for successful careers as software designers and developers.
Understanding the Competency-Based Approach

Practically speaking, what does it mean when we say that WGU’s programs are competency-based? Unlike traditional universities, WGU does not award degrees based on credit hours or on a certain set of required courses. Instead, you will earn your degree by demonstrating your skills, knowledge, and understanding of important concepts through a series of carefully designed courses.

Progress through your degree program is governed not by classes but by satisfactory completion of the required courses that demonstrate your mastery of the competencies. Of course, you will need to engage in learning experiences as you brush up on competencies or develop knowledge and skills in areas in which you may be weak. For this learning and development, WGU has a rich array of learning resources in which you may engage under the direction of your student mentor. You will work closely with your mentor to schedule your program for completing the courses. You will also work closely with additional faculty members as you proceed through courses of study that are designed to lead you through the content you must master in order to pass the assessment(s) for each course.

The benefit of this competency-based system is that it makes it possible for people who are knowledgeable about a particular subject to make accelerated progress toward completing a WGU degree, even if they lack college experience. You may have gained skills and knowledge of a subject while on the job, accumulated wisdom through years of life experience, or, indeed, taken a course on a particular subject. WGU will award your degree based on the skills and knowledge that you possess and can demonstrate—not the number of credits hours on your transcript.

Accreditation

Western Governors University is the only university in the history of American higher education to have earned accreditation from four regional accrediting commissions. WGU’s accreditation was awarded by (1) the Northwest Commission on Colleges and Universities, (2) the Higher Learning Commission of the North Central Association of Colleges and Schools, (3) the Accrediting Commission for Community and Junior Colleges of the Western Association of Schools and Colleges, and (4) the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges. The university’s accreditation status is now managed by the Northwest Commission on Colleges and Universities (NWCCU). The WGU Teachers College is accredited by the National Council for Accreditation of Teacher Education (NCATE). The nursing programs are accredited by the Commission on Collegiate Nursing Education (CCNE). The Health Information Management program is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM).

The Degree Plan

The focus of your program is your personalized Degree Plan. The Degree Plan is a detailed blueprint of the courses you will need to complete in order to earn your degree. The Degree Plan also lays out the accompanying learning resources and assessments that compose your program. The list of courses in the Degree Plan is often referred to as the standard path. The amount of time it takes to complete your program depends on both the amount of new information you need to learn and the amount of time you plan to devote each week to study.
Students will vary widely in the specific skills and information they need to learn. For example, some students may be highly knowledgeable in a particular subject matter and would not need to engage in new learning opportunities. Other students may find that portions of the program require them to learn new information and that they may need to take an online class or participate in a study module to acquire the knowledge and skills needed to pass the program competencies in that area. Some individuals may be able to devote as little as 15–20 hours per week to the program, while others may need to devote more time. For this reason, you will complete preassessments to help your mentor form a profile of your prior knowledge and experience for use in creating your personalized Degree Plan.

**WGU’s Mentoring Approach**

The mentoring approach is a powerful component of the WGU educational experience. When you enroll at WGU, you will begin interacting with your student mentor, course mentors, and other support staff. Your student mentor will meet with you on a regular basis and take an active role and a personal interest in your success. Your student mentor will be your point of contact throughout your program and will be available to communicate with you via e-mail or phone. Your mentor will help you set weekly study goals, guide you to learning materials, help you understand what to expect in courses, and motivate you to work hard to complete your program. When you have questions or concerns, your mentor will help you resolve them.

As you work on each course, you will also be assigned course mentors. These course mentors are content experts who can discuss your learning for the course, help you find answers to content questions, and help you navigate the course successfully. Your course mentors are available to meet with you individually to provide personal support. You can also communicate with them by posting in the online learning community and participating in live discussion sessions such as webinars and cohorts.

Working closely with your own personal mentoring team will help you engage in the learning process and be a successful student while at WGU.

**Connecting with Other Mentors and Fellow Students**

As you proceed through your Degree Plan, you will have direct contact with multiple faculty members. These communications can take a variety of forms, including participation in one-on-one discussions, chats in the learning communities, and live cohort and webinar opportunities. As a WGU student, you will have access to your own personal myWGU Student Portal, which will provide a gateway to your courses of study, learning resources, and learning communities where you will have interactions with faculty and other students.

The resources in each course are specifically designed to support you as you develop competencies in preparation for your assessments through the utilization of reading materials, videos, tutorials, cohort opportunities, community discussions, and live discussions that are guided by content experts. You will access your program community during your orientation course to network with peers who are enrolled in your program and to receive continued support through professional enrichment and program-specific chats, blogs, and discussions. WGU also provides Student Services Associates to help you and your mentor solve any special problems that may arise.
**Orientation**

The WGU orientation course focuses on acquainting you with WGU’s competency-based model, distance education, technology, and other resources and tools available for students. You will also utilize WGU program and course communities, participate in activities, and get to know other students at WGU. The orientation course must be completed before you can start your first term at WGU.

**Transferability of Prior College Coursework**

Because WGU is a competency-based institution, it does not award degrees based on credits but rather on demonstration of competency. However, if you have completed college coursework at another accredited institution, or if you have completed industry certifications, you may have your transcripts and certifications evaluated to determine if you are eligible to receive some transfer credit. The guidelines for determining what credits will be granted varies based on the degree program. Students entering graduate programs must have their undergraduate degree verified before being admitted to WGU. To review more information in regards to transfer guidelines based on the different degree programs, you may visit the Student Handbook found at the link below and search for “Transfer Credit Evaluation.”

[Click here for the Student Handbook](#)

WGU does not waive any requirements based on a student’s professional experience and does not perform a “résumé review” or “portfolio review” that will automatically waive any degree requirements. Degree requirements and transferability rules are subject to change in order to keep the degree content relevant and current.

Remember, WGU’s competency-based approach lets you take advantage of your knowledge and skills, regardless of how you obtained them. Even when you do not directly receive credit, the knowledge you possess may help you accelerate the time it takes to complete your degree program.

**Continuous Enrollment, On Time Progress, and Satisfactory Academic Progress**

WGU is a “continuous enrollment” institution, which means you will be automatically enrolled in each of your new terms while you are at WGU. Each term is six months long. Longer terms and continuous enrollment allow you to focus on your studies without the hassle of unnatural breaks between terms that you would experience at a more traditional university. At the end of every six-month term, you and your student mentor will review the progress you have made and revise your Degree Plan for your next six-month term.

WGU requires that students make measurable progress toward the completion of their degree programs every term. We call this “On-Time Progress,” denoting that you are on track and making progress toward on-time graduation. As full-time students, graduate students must enroll in at least eight (8) competency units each term, and undergraduate students must enroll in at least twelve (12) competency units each term. Completing at least these minimum enrollments is essential to On-Time Progress and serves as a baseline from which you may accelerate your program. We measure your progress based on the courses you are able to pass, not on your accumulation of credit hours or course grades. Every time you pass a course you are demonstrating that you have mastered skills and knowledge in your degree
program. For comparison to traditional grading systems, passing a course means you have demonstrated competency equivalent to a “B” grade or better.

WGU assigns competency units to each course in order to track your progress through the program. A competency unit is equivalent to one semester credit of learning. Some courses may be assigned 3 competency units while others may be as large as 12 competency units.

Satisfactory Academic Progress (SAP) is particularly important to students on financial aid because you must achieve SAP in order to maintain eligibility for financial aid. We will measure your SAP quantitatively by reviewing the number of competency units you have completed each term. In order to remain in good academic standing, you must complete at least 66.67% of the units you attempt over the length of your program—including any courses you add to your term to accelerate your progress. Additionally, during your first term at WGU you must pass at least 3 competency units in order to remain eligible for financial aid. We know that SAP is complex, so please contact a financial aid counselor should you have additional questions.

Courses

Your Degree Plan includes courses needed to complete your program. To obtain your degree, you will be required to demonstrate your skills and knowledge by completing the assessment(s) for each course. In general there are two types of assessments: performance assessments and objective assessments. Performance assessments contain, in most cases, multiple scored tasks such as projects, essays, and research papers. Objective assessments include multiple-choice items, multiple-selection items, matching, short answer, drag-and-drop, and point-and-click item types, as well as case study and video-based items. Certifications verified through third parties may also be included in your program. More detailed information about each assessment is provided in each course of study.

Learning Resources

WGU works with many different educational partners, including enterprises, publishers, training companies, and higher educational institutions, to provide high-quality and effective learning resources that match the competencies you’re developing. These vary in type, and may be combined to create the best learning experience for your course. A learning resource can be an e-textbook, online module, study guide, simulation, virtual lab, tutorial, or a combination of these. The cost of most learning resources are included in your tuition and Learning Resource Fee. They can be accessed or enrolled for through your courses. Some degree-specific resources are not covered by your tuition, and you will need to cover those costs separately. WGU also provides a robust library to help you obtain additional learning resources, as needed.

Mobile Compatibility:

The following article provides additional details about the current state of mobile compatibility for learning resources at WGU. It includes a list that can be referenced to determine the mobile friendliness of all core course materials used in a program.

Student Handbook article: Can I use my mobile device for learning resources?
As previously mentioned, competency units (CUs) have been assigned to each course in order to measure your academic progress. If you are an undergraduate student, you will be expected to enroll in a minimum of 12 competency units each term. Graduate students are expected to enroll in a minimum of 8 competency units each term. A standard plan for a student for this program who entered WGU without any transfer units would look similar to the one on the following page. Your personal progress can be faster, but your pace will be determined by the extent of your transfer units, your time commitment, and your determination to proceed at a faster rate.

### Changes to Curriculum

WGU publishes an Institutional Catalog, which describes the academic requirements of each degree program. Although students are required to complete the program version current at the time of their enrollment, WGU may modify requirements and course offerings within that version of the program to maintain the currency and relevance of WGU’s competencies and programs. As these changes are implemented, WGU will ensure that the length of the student’s degree program (i.e., total competency unit requirements) will not increase and that competency units already earned will be applied to the updated program version. When program requirements are updated, students returning from term break or returning after withdrawal from the university will be expected to re-enter the updated version of the program.
Areas of Study for Bachelor of Science, Software Development

The following section includes the areas of study in the program, with their associated courses. Your specific learning resources and level of instructional support will vary based on the individual competencies you bring to the program and your confidence in developing the knowledge, skills, and abilities required in each area of the degree. The Degree Plan and learning resources are dynamic, so you need to review your Degree Plan and seek the advice of your mentor regarding the resources before you purchase them.

IT Fundamentals

Introduction to IT
This course introduces students to information technology as a discipline and the various roles and functions of the IT department as business support. Students are presented with various IT disciplines including systems and services, network and security, scripting and programming, data management, and business of IT, with a survey of technologies in every area and how they relate to each other and to the business.

This course covers the following competencies:

- The graduate describes the structure, function, and security associated with networks.
- The graduate explains the structure and function of databases.
- The graduate describes IT as a discipline and discusses the history and future of computing as well as the currently used infrastructure.
- The graduate explains the role of technology in today's business environment and describes basic concepts of project management.
- The graduate identifies common software architectures, development techniques, and the relationship between software and its environment.
- The graduate describes information technology systems and their role in converting data to organizational knowledge.
- The graduate identifies the role of different types of software in a computing environment and explains the fundamentals of software development.
- The graduate evaluates ethical concerns involved in the use of technology.
- The graduate recognizes and describes functions of basic computer hardware components.

IT Foundations

IT Foundations is the first course in a two-part series preparatory for the CompTIA A+ exam, Part I. Students will gain an understanding of personal computer components and their functions in a desktop system, as well as computer data storage and retrieval; classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers, laptops, portable devices, operating systems, networks, and system security; recommending appropriate tools, diagnostic procedures, preventative maintenance and troubleshooting techniques for personal computer components in a desktop system; strategies for identifying, preventing, and reporting safety hazards and environmental/human accidents in a technological environments; and effective communication with colleagues and clients as well as job-related professional behavior.

This course covers the following competencies:

- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, and upgrading basic network types.
- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting laptops and mobile devices.
The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers.

The graduate demonstrates an understanding of personal computer components and their function in a desktop system.

The graduate demonstrates a basic working knowledge of computer data storage and information retrieval.

IT Applications
IT Applications is a continuation of the IT Foundations course preparatory for the CompTIA A+ exam, Part II. Students will gain an understanding of personal computer components and their functions in a desktop system. Also covered is computer data storage and retrieval, including classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers, laptops, portable devices, operating systems, networks, and system security. Other areas include recommending appropriate tools, diagnostic procedures, preventative maintenance and troubleshooting techniques for personal computer components in a desktop system. The course then finished with strategies for identifying, preventing, and reporting safety hazards and environmental/human accidents in a technological environments, and effective communication with colleagues and clients as well as job-related professional behavior.

This course covers the following competencies:

- The graduate recommends appropriate strategies for classifying, controlling access, setting permission, configuring, optimizing, and upgrading basic system security.

- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting laptops, tablets, and mobile devices.

- The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting computer operating systems.

- The graduate recommends appropriate tools, diagnostic procedures, preventive maintenance, and troubleshooting techniques for personal computer components in a desktop system.

General Education

Critical Thinking and Logic
Reasoning and Problem Solving helps students internalize a systematic process for exploring issues that takes them beyond an unexamined point of view and encourages them to become more self-aware thinkers by applying principles of problem identification and clarification, planning and information gathering, identifying assumptions and values, analysis and interpretation of information and data, reaching well-founded conclusions, and identifying the role of critical thinking in the disciplines and professions.

This course covers the following competencies:

- The graduate recognizes the value of critical thinking in identifying and understanding the underlying structures of the disciplines and professions.

- The graduate evaluates different sources representing a range of perspectives on a problem in order to weigh the implications and consequences of different solutions to the problem.

- The graduate synthesizes information to understand a problem’s complexities and potential solutions, and then evaluates the reasoning and evidence in support of these different solutions.

- The graduate identifies internal and external biases and assumptions related to a problem, and evaluates the influence and validity of these biases and assumptions.

- The graduate logically brings together information to arrive at a viable solution to a problem, and then clearly and accurately communicates the results.

- The graduate analyzes open-ended problems by learning about the problem and evaluating the accuracy and relevance of different perspectives on the problem.
Introduction to Communication

This introductory communication course allows students to become familiar with the fundamental communication theories and practices necessary to engage in healthy professional and personal relationships. Students will survey human communication on multiple levels and critically apply the theoretical grounding of the course to interpersonal, intercultural, small group, and public presentational contexts. The course also encourages students to consider the influence of language, perception, culture, and media on their daily communicative interactions. In addition to theory, students will engage in the application of effective communication skills through systematically preparing and delivering an oral presentation. By practicing these fundamental skills in human communication, students become more competent communicators as they develop more flexible, useful, and discriminatory communicative practices in a variety of contexts.

This course covers the following competencies:

- The graduate applies foundational elements of effective communication.
- The graduate applies appropriate communication strategies in interpersonal and group contexts
- The graduate utilizes appropriate presentational communication strategies in personal and professional settings.

English Composition I

English Composition I introduces learners to the types of writing and thinking that are valued in college and beyond. Students will practice writing in several genres with emphasis placed on writing and revising academic arguments. Instruction and exercises in grammar, mechanics, research documentation, and style are paired with each module so that writers can practice these skills as necessary. Comp I is a foundational course designed to help students prepare for success at the college level. There are no prerequisites for English Composition I.

This course covers the following competencies:

- The graduate integrates credible and relevant sources into written arguments.
- The graduate uses appropriate writing and revision strategies
- The graduate composes an appropriate argumentative essay for a given context.
- The graduate composes an appropriate narrative for a given context.
- The graduate appropriately uses a given writing style.
- The graduate selects appropriate rhetorical strategies that improve writing and argumentation.
- The graduate applies appropriate grammatical rules, sentence structure, and writing conventions.

English Composition II

English Composition II introduces undergraduate students to research writing. It is a foundational course designed to help students prepare for advanced writing within the discipline and to complete the capstone. Specifically, this course will help students develop or improve research, reference citation, document organization, and writing skills. English Composition I or equivalent is a prerequisite for this course.

This course covers the following competencies:

- The graduate applies steps of the writing process appropriately to improve quality of writing.
- The graduate composes an argumentative research paper.
- The graduate evaluates the quality, credibility, and relevance of evidence in order to integrate evidence into a final research paper.

Introduction to Humanities

This introductory humanities course allows students to practice essential writing, communication, and critical thinking skills necessary to engage in civic and professional interactions as mature, informed adults. Whether through studying literature,
visual and performing arts, or philosophy, all humanities courses stress the need to form reasoned, analytical, and articulate responses to cultural and creative works. Studying a wide variety of creative works allows students to more effectively enter the global community with a broad and enlightened perspective.

This course covers the following competencies:

- The graduate analyzes the primary contributions and characteristics of humanities during the Classical period.
- The graduate analyzes the primary contributions and characteristics of humanities during the Romantic period.
- The graduate assesses the development of humans through the study of key concepts, disciplines, and primary influences of the humanities.
- The graduate analyzes the primary contributions and characteristics of humanities during the Renaissance.
- The graduate analyzes the primary contributions and characteristics of humanities within the Neoclassical and Enlightenment period.
- The graduate analyzes the primary contributions and characteristics of humanities during the Realist movement.

College Algebra

This course provides further application and analysis of algebraic concepts and functions through mathematical modeling of real-world situations. Topics include: real numbers, algebraic expressions, equations and inequalities, graphs and functions, polynomial and rational functions, exponential and logarithmic functions, and systems of linear equations.

This course covers the following competencies:

- The graduate simplifies and factors polynomial expressions, and solves polynomial equations.
- The graduate solves systems of linear equations and their related applications.
- The graduate simplifies rational, radical, and quadratic expressions, solves corresponding equations, and extends this knowledge to the study of functions.
- The graduate combines functions, finds inverse functions, solves exponential and logarithmic equations and functions.
- The graduate classifies and performs operations on real numbers; solves linear equations and inequalities; connects a linear equation to its graph; and identifies a function.

Introduction to Geography

This course will discuss geographic concepts, places and regions, physical and human systems and the environment.

This course covers the following competencies:

- The graduate can describe and discuss fundamental concepts in geography.
- The graduate can describe and discuss environment.
- The graduate can describe and discuss human systems.
- The graduate can describe and discuss physical systems.
- The graduate can describe and discuss places and regions.

Introduction to Probability and Statistics

In this course, students demonstrate competency in the basic concepts, logic, and issues involved in statistical reasoning. Topics include summarizing and analyzing data, sampling and study design, and probability.

This course covers the following competencies:

- The graduate applies theoretical or empirical probability to a situation to quantify uncertainty.
- The graduate evaluates the sampling methods used in studies including the effect they have on conclusions that can be made.
● The graduate evaluates the relationship between two variables through the creation and interpretation of numerical summaries and visual displays.

● The graduate determines the probability of events using simulations, diagrams, and probability rules.

● The graduate evaluates categorical and quantitative data using appropriate numerical measures and graphical displays.

● The graduate designs and conducts observational studies, controlled experiments, and surveys to explore population characteristics.

General Science Content

Integrated Physical Sciences
This course provides students with an overview of the basic principles and unifying ideas of the physical sciences: physics, chemistry, and Earth sciences. Course materials focus on scientific reasoning and practical and everyday applications of physical science concepts to help students integrate conceptual knowledge with practical skills.

This course covers the following competencies:

● The graduate describes the underlying organization, interactions, and processes within the Earth system including the Earth’s structure and atmosphere, and Earth’s interactions within the solar system.

● The graduate describes the nature and process of science.

● The graduate examines applications of physics including fundamental concepts such as forces, motion, energy, and waves.

● The graduate examines applications of key chemistry concepts including the structure of matter and the behavior and conservation of matter in chemical reactions.

Natural Science Lab
This course gives you an introduction to using the scientific method and engaging in scientific research to reach conclusions about the natural world. You will design and carry out an experiment to investigate a hypothesis by gathering quantitative data.

This course covers the following competencies:

● The graduate accurately executes the process of scientific inquiry through experimentation in the natural world.

● The graduate draws conclusions based on academic research and scientific inquiry.

● The graduate evaluates academic sources for their credibility and relevance to a chosen research topic on a natural world phenomenon.

Scripting and Programming

Scripting and Programming - Foundations
This course provides an introduction to programming covering data structures, algorithms, and programming paradigms. The course presents the student with the concept of an object as well as the object-oriented paradigm and its importance. A survey of languages is covered and the distinction between interpreted and compiled languages is introduced.

This course covers the following competencies:

● The graduate integrates the object-oriented programming paradigm in scripting and programming.

● The graduate performs basic computer programming including working with data types, constants, variables, operator types, expressions, and functions.

● The graduate implements basic constructs of programming, including working with control structures.
• The graduate describes steps of the design process.
• The graduate analyzes algorithms, including algorithm efficiency, and recursion.
• The graduate compares various programming languages.

Scripting and Programming - Applications
This course provides an introduction to programming. It covers data structures, algorithms, and programming paradigms. It presents the concept of an object as well as the object-oriented paradigm and its importance. A survey of languages is covered and the distinction between interpreted and compiled languages is introduced.

This course covers the following competencies:
• The graduate declares, initializes, and assigns values to a variable and differentiates between primitive and object data types.
• The graduate defines programming languages, identifies common algorithms, and identifies the parts of the Java Programming Environment.
• The graduate utilizes decision and loop constructs to control the flow of a program.
• The graduate understands the object-oriented programming paradigm and identifies its elements.

Web Development

Web Development Foundations
This course prepares students for the CIW Site Development Associate certification. The course introduces students to web design and development by presenting them with HTML5 and CSS, the foundational languages of the web, by reviewing media strategies, and by using tools and techniques commonly employed in web development.

This course covers the following competencies:
• The graduate develops a plan for creating and maintaining a website that addresses specific business needs while maintaining industry and ethical standards.
• The graduate creates web pages using a GUI editor as well as basic HTML5 and CSS 3 elements.

User Interface Design
This course covers tools and techniques employed in user interface design including web and mobile applications. Concepts of clarity, usability and detectability are included in this course as well as other design elements such as color schemes, typography, and layout. Techniques like wireframing, usability testing, and SEO optimization are also covered. This course prepares students for the CIW User Interface Designer certification.

This course covers the following competencies:
• The graduate explains user interface design principles.
• The graduate explains the relationship between the user and the site design.
• The graduate builds a web page wireframe.
• The graduate creates multiple web pages, using best practices in design technique.
• The graduate analyzes best practices in designing interactive elements of User Interfaces.
• The graduate explains the best practice strategies for maintaining websites, including Search Engine Optimization.
• The graduate describes user interface design project constructs.
• The graduate creates a navigation hierarchy for a website.
● The graduate describes the user interface design process.

Web Development Applications
This course prepares students for the CIW Advanced HTML5 and CSS3 Specialist certification exam. This course builds upon a student’s manual coding skills by teaching how to develop web documents and pages using the Web Development Trifecta: HTML5 (Hypertext Markup Language version 5) and CSS3 (Cascading Style Sheets version 3) and JavaScript. Students will utilize the skills learned in this course to create web documents and pages that easily adapt to display on both traditional and mobile devices. In addition, students will learn techniques for code validation and testing, form creation, inline form field validation, and mobile design for browsers and apps, including Responsive Web Design (RWD).

This course covers the following competencies:
● The graduate uses JavaScript to enhance web development and design.
● The graduate develops web pages tested for compatibility between traditional and mobile devices.
● The graduate validates user input forms using both HTML5 and JavaScript techniques.
● The graduate assembles web pages by using, creating, and validating HTML5 code.
● The graduate develops web documents using CSS3 to position and format content, to enhance accessibility, and to create effects such as transformations, transitions, and animations.
● The graduate improves the functionality of web pages using HTML5 APIs to add features such as geolocation, drag-and-drop, canvas, and offline web applications.

Network and Security

Network and Security - Foundations
Network and Security - Foundations introduces students to the components of a computer network and the concept and role of communication protocols. The course will cover widely used categorical classifications of networks (i.e. LAN, MAN, WAN, PAN, and VPN) as well as network topologies, physical devices, and layered abstraction. The course will also introduce students to basic concepts of security covering vulnerabilities of networks and mitigation techniques, security of physical media, and security policies and procedures.

This course covers the following competencies:
● The graduate identifies the functional and technical components of network systems.
● The graduate identifies the basic concepts essential to network security.
● The graduate identifies the basic concepts essential to networking.

Leadership and Management

Organizational Behavior and Leadership
Organizational Behavior and Leadership explores how to lead and manage effectively in diverse business environments. Students are asked to demonstrate the ability to apply organizational leadership theories and management strategies in a series of scenario-based problems.

This course covers the following competencies:
● The graduate can describe the effects of specified influences on individual behavior.
● The graduate can analyze leadership theories, methods, and tools in given situations and select the appropriate behavior of the leader.
● The graduate can develop and recommend how to implement effective performance evaluation processes.
● The graduate can determine which type of team and team leadership should be used to accomplish a task or project.
• The graduate analyzes the culture within an organization to determine how to work effectively within that organization.
• The graduate can recommend appropriate principles or techniques for guiding the development of a group.

Principles of Management
This course addresses strategic planning, total quality, entrepreneurship, conflict and change, human resource management, diversity, and organizational structure.

This course covers the following competencies:
• The graduate can recommend an organizational structure to match a given organization’s situation.
• The graduate can recommend effective techniques for managing conflict and change.
• The graduate can describe how to establish and promote an entrepreneurial emphasis within an organization.
• The graduate can correctly apply principles of human resource management in a given situation.
• The graduate responds appropriately to diversity issues in the workplace.
• The graduate can explain the strategic planning process.
• The graduate can describe how to establish a total quality management program in a product operation and in a service operation.

Technical Writing

Technical Communication
This course covers basic elements of technical communication, including professional written communication proficiency; the ability to stratagize approaches for differing audiences; and technical style, grammar, and syntax proficiency.

This course covers the following competencies:
• The graduate creates various technically written artifacts using appropriate technical communication concepts.
• The graduate integrates basic elements of technical communication, including audience analysis, the writing process, correct grammar, and appropriate design elements.
• The graduate makes strategic and appropriate communication decisions based on the audience.

Data Management

Data Management - Foundations
This course introduces students to the concepts and terminology used in the field of data management. They will be introduced to Structured Query Language (SQL) and will learn how to use Data Definition Language (DDL) and Data Manipulation Language (DML) commands to define, retrieve, and manipulate data. This course covers differentiations of data—structured vs. unstructured and quasi-structured (relational, hierarchical, XML, textual, visual, etc); it also covers aspects of data management (quality, policy, storage methodologies). Foundational concepts of data security are included.

This course covers the following competencies:
• The graduate explains how data, databases, and data management are used in today’s organizations.
• The graduate analyzes the relational model of data.
• The graduate interprets the concepts of analytical processing within the context of business intelligence.
• The graduate implements SQL concepts and coding.
• The graduate demonstrates appropriate strategies to normalize data.
• The graduate demonstrates an understanding of the concepts involved in the modeling of data.

Data Management - Applications
This course covers conceptual data modeling and provides an introduction to MySQL. Students will learn how to create simple to complex SELECT queries including subqueries and joins, and will also learn how to use SQL to update and delete data. Topics covered in this course include exposure to MySQL; developing physical schemas; creating and modifying databases, tables, views, foreign keys/primary keys (FKs/PKs), and indexes; populating tables; and developing simple Select-From-Where (SFW) queries to complex 3+ table join queries.

This course covers the following competencies:
• The graduate creates conceptual data models and translates them into physical schemas.
• The graduate writes code to create and modify tables and views employing SQL Data Definition Language (DDL) in MySQL environment.
• The graduate creates simple Select-From-Where (SFW) and complex 3+ table join queries with Data Manipulation Language (DML) in MySQL environment.
• The graduate populates tables with insert, update, and delete using DML in MySQL environment.
• The graduate creates databases utilizing SQL Data Definition Language (DDL) in MySQL environment.
• The graduate writes code to create and modify Primary Keys (PKs) and Foreign Keys (FKs) and Indexes with SQL Data Definition Language (DDL) in MySQL environment.

Data Management for Programmers
This course introduces storage of various kinds and formats of data. Students will use standard SQL to demonstrate query capabilities provided by database management systems. The course will further cover data-related topics: data presentation, security (access and encryption), transaction management, and administration (backup, disaster recovery, and performance tuning). This course will address advanced topics such as data warehousing, data mining and distributed databases.

This course covers the following competencies:
• The graduate logically and physically distributes data through the design of data warehouses, data marts, and distributed databases.
• The graduate administers data by performing backups, disaster recovery planning, and SQL performance tuning and query optimization.
• The graduate designs a conceptual and logical model for storing various formats and types of data in a database management system (DBMS).
• The graduate secures data by designing and implementing access controls and encryption.
• The graduate applies tools and technologies such as XML, warehouses, and data mining to extract and present data.
• The graduate applies SQL Data Definition Language (DDL) to create, modify, and drop databases, tables, views, and indexes; employs SQL Data Manipulation Language (DML) to select, insert, update, and delete data in tables in a database management system (DBMS) environment; and programs in SQL Programming Language (PL/SQL) to run persistent applications such as stored procedures, functions, and triggers.
• The graduate manages data transactions through ACID (atomicity, consistency, isolation, durability) properties and concurrency control: serialization, locking methods, deadlock prevention, timestamping, and optimistic techniques.

Operating Systems

Operating Systems for Programmers
This course covers operating systems from the perspective of a programmer including the placement of the operating
system in the layered application development model. Primarily OSs provide Memory Management, Task Scheduling, and CPU allocation. Secondarily, OSs provide tools for file storage/access, permission control, event handling, network access, and cross-process interaction. OSs also provide tools for debugging problems within a single process or within groups of programs.

This course covers the following competencies:

- The graduate describes operating systems, their functions, and their structure.
- The graduate describes different file systems and I/O algorithms.
- The graduate describes mechanisms used by the operating system for protection and security and how they relate to software applications.
- The graduate describes processes and threads and their relationship to multithreading and parallel programming.
- The graduate explains the different approaches to memory management and how they affect CPU utilization.

Software

Software Engineering
This course introduces the concepts of software engineering to IT core graduates. It is a standalone course that is critical to the IT program. It emphasizes the need for a disciplined approach to software engineering by providing an overview of software and software engineering processes and why they are challenging. A generic process framework is covered to provide the groundwork for formal process models. Prescriptive process models (e.g., Waterfall Model) and Agile Development is included. An introduction to the elements/phases of software engineering is introduced which includes Requirements Engineering (including UML, Use Cases), Design Concepts, Software Quality and Software Testing, and Project Management.

This course covers the following competencies:

- The graduate defines requirements engineering concepts, describes requirements engineering processes, and selects appropriate graphical models for specific projects.
- The graduate describes software and legacy software; the core principles of software engineering, the generic process framework, introductory software engineering concepts and terms; and selects appropriate model activities when given project descriptions.
- The graduate describes software engineering process models (e.g., waterfall, agile methodologies) and selects appropriate models when given project descriptions.
- The graduate describes quality assurance processes and explains how to implement quality and software testing concepts in specific cases.
- The graduate describes software design and design concepts and classes and identifies appropriate uses of design concepts for specific projects.

Software I
Software I builds object-oriented programming expertise and introduces powerful new tools for Java application development. You will learn about and put into action class design, exception handling, and other object-oriented principles and constructs to develop software that meets business requirements. This course requires foundational knowledge of object-oriented programming and the Java language.

This course covers the following competencies:

- The graduate incorporates simple exception handling in application development for improving user experience and application stability.
- The graduate develops user interfaces to meet project requirements.
- The graduate produces applications using high-level programming language constructs to meet business requirements.
The graduate implements object-oriented design principles (e.g., inheritance, encapsulation, and abstraction) in developing applications for ensuring the application’s scalability.

The graduate designs software solutions with appropriate classes, objects, methods, and interfaces to achieve specific goals.

Software II - Advanced Java Concepts

Software II – Advanced Java Concepts refines object-oriented programming expertise and builds database and file server application development skills. You will learn about and put into action lambda expressions, collections, input/output, advanced error handling, and the newest features of Java 8 to develop software that meets business requirements. This course requires intermediate expertise in object-oriented programming and the Java language.

This course covers the following competencies:

● The graduate incorporates lambda expressions in application development to meet business requirements more efficiently.

● The graduate produces database and file server applications using advanced constructs in a high-level programming language to meet business requirements.

● The graduate applies the localization API and date/time API in application development to support end-users in various geographical regions.

● The graduate incorporates advanced exception control mechanisms in application development for improving user experience and application stability.

● The graduate incorporates streams and filters in application development to manipulate data more efficiently.

Business of IT

Business of IT - Applications

This course introduces IT students to information systems (IS). The course includes important topics related to management of information systems (MIS), such as system development, and business continuity. The course also provides an overview of management tools and issue tracking systems.

This course covers the following competencies:

● The graduate justifies the need for support center tools and ways to manage the support processes.

● The graduate analyzes the role of management in information systems and the necessity for security and contingency planning.

● The graduate analyzes the different methods of systems development for the purpose of recommending an appropriate method for a project.

● The graduate explains how the general principles of information systems integrate with each other, and their roles in the business process within an organization.

Business of IT - Project Management

In this course, students will build on industry standard concepts, techniques, and processes to develop a comprehensive foundation for project management activities. During a project’s life cycle, students will develop the critical skills necessary to initiate, plan, execute, monitor, control, and close a project. Students will apply best practices in areas such as scope management, resource allocation, project planning, project scheduling, quality control, risk management, performance measurement, and project reporting. This course prepares students for the following certification exam: CompTIA Project+.

This course covers the following competencies:

● The graduate determines project tools and documentation methods to measure and monitor project performance.

● The graduate applies communication methods and change control processes to maintain clarity of project plans,
activities, and changes for stakeholders.

- The graduate determines the impact of project constraints and influences to manage risk.
- The graduate applies key project management processes to guide business initiatives.

Software Applications

Client-Server Application Development
This course introduces students to client/server application programming classes, structures, and concepts. The course covers networking and client/server, streams, threads, URLs, URIs, HTTP, and socket programming concepts.

This course covers the following competencies:
- The graduate develops client/server applications that implement the Internet classes in Java, including proxies.
- The graduate explains the nature of streams and writes Java code to implement and manipulate threads and streams.
- The graduate explains basic concepts of networking, including the Internet.
- The graduate implements client and server sockets, including secure sockets.

Mobile Application Development
This course introduces students to programming for mobile devices using a Software Development Kit (SDK). Students with previous knowledge of programming will learn how to install and utilize a SDK, build a basic mobile application, build a mobile applications using a graphical user interface(GUI), adapt applications to different mobile devices, save data, execute and debug mobile applications using emulators, and deploy a mobile application.

This course covers the following competencies:
- The graduate explains ways to save data in a mobile application, and creates a database in a mobile application.
- The graduate explains how to share information in mobile applications and creates a user-defined content provider.
- The graduate creates a user interface and describes how to handle user input.
- The graduate describes how to utilize the available hardware and services available in different devices.
- The graduate describes the Activity lifecycle in the mobile application, and creates and links an activity.
- The graduate explains mobile development, develops a simple mobile application using the IDE, documents debugging the mobile application, and describes how to use an emulator.
- The graduate describes mobile application deployment and prepares and application for deployment.

Capstone

IT Capstone Written Project
The capstone project consists of a technical work proposal, the proposal’s implementation, and a post-implementation report that describes the graduate’s experience in developing and implementing the capstone project. The capstone project should be presented and approved by the mentor in relation to the graduate’s technical emphasis.

This course covers the following competencies:
- The graduate integrates and synthesizes competencies from across the degree program, thereby demonstrating the ability to participate in and contribute value to the chosen professional field.
Need More Information? WGU Student Services

WGU’s Student Services team is dedicated exclusively to helping you achieve your academic goals. The Student Services office is available during extended hours to assist with general questions and administrative or accessibility issues. The Student Services team members help you resolve issues, listen to student issues and concerns, and make recommendations for improving policy and practice based on student feedback. The Student Services team provides a formal means by which you can express your views, which in turn will inform the decisions we make.

Student Services team members also assist with unresolved concerns to find equitable resolutions. To contact the Student Services team, please feel free to call 877-435-7948 or e-mail studentservices@wgu.edu. We are available Monday through Friday from 6:00 a.m. to 10:00 p.m., Saturday from 7:00 a.m. to 7:00 p.m., mountain standard time. Closed Sundays.

If you have inquiries or concerns that require technical support, please contact the WGU IT Service Desk. The IT Service Desk is available Monday through Friday, 6:00 a.m. to 10:00 p.m. and Saturday and Sunday, 10:00 a.m. to 7:00 p.m., mountain standard time. To contact the IT Service Desk, please call 1-877-HELP-WGU (877-435-7948) or e-mail servicedesk@wgu.edu. The support teams are generally closed in observance of university holidays.

For the most current information regarding WGU support services, please visit “Student Support” on the Student Portal at http://my.wgu.edu.
