

Program Guidebook

Bachelor of Science, Network Operations and Security

In response to an increasing demand for network operations and security professionals, the Bachelor of Science, Network Operations and Security (BSNOS) degree program prepares IT professionals to apply knowledge and experience in network design, network operations, network security, and cloud security to manage network infrastructure and secure data through effective IT policies and procedures. Courses deliver proven methods for network administration to ensure uptime, performance, resources, and security of networks to meet the needs of the organization. The program builds upon a core IT curriculum: systems and services, networking and security, scripting and programming, data management, business of IT, and web development. Students seeking the BS, Network Operations and Security degree demonstrate additional competencies in this area by taking and passing specific industry certification exams in major network systems.

Understanding the Competency-Based Approach

Practically speaking, what does it mean when we say that WGU's programs are competency-based? Unlike traditional universities, WGU does not award degrees based on credit hours or on a certain set of required courses. Instead, you will earn your degree by demonstrating your skills, knowledge, and understanding of important concepts through a series of carefully designed courses.

Progress through your degree program is governed not by classes but by satisfactory completion of the required courses that demonstrate your mastery of the competencies. Of course, you will need to engage in learning experiences as you brush up on competencies or develop knowledge and skills in areas in which you may be weak. For this learning and development, WGU has a rich array of learning resources in which you may engage under the direction of your program mentor. You will work closely with your program mentor to schedule your program for completing the courses. You will also work closely with additional faculty members as you proceed through courses of study that are designed to lead you through the content you must master in order to pass the assessment(s) for each course.

The benefit of this competency-based system is that it makes it possible for people who are knowledgeable about a particular subject to make accelerated progress toward completing a WGU degree, even if they lack college experience. You may have gained skills and knowledge of a subject while on the job, accumulated wisdom through years of life experience, or, indeed, taken a course on a particular subject. WGU will award your degree based on the skills and knowledge that you possess and can demonstrate—not the number of credits hours on your transcript.

Accreditation

Western Governors University is the only university in the history of American higher education to have earned accreditation from four regional accrediting commissions. WGU's accreditation was awarded by (1) the Northwest Commission on Colleges and Universities, (2) the Higher Learning Commission of the North Central Association of Colleges and Schools, (3) the Accrediting Commission for Community and Junior Colleges of the Western Association of Schools and Colleges, and (4) the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges. The university's accreditation status is now managed by the Northwest Commission on Colleges and Universities (NWCCU). The WGU Teachers College is accredited by the National Council for Accreditation of Teacher Education (NCATE). The nursing programs are accredited by the Commission on Collegiate Nursing Education (CCNE). The Health Information Management program is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM).

The Degree Plan

The focus of your program is your personalized Degree Plan. The Degree Plan is a detailed blueprint of the courses you will need to complete in order to earn your degree. The Degree Plan also lays out the accompanying learning resources and assessments that compose your program. The list of courses in the Degree Plan is often referred to as the standard path. The amount of time it takes to complete your program depends on both the amount of new information you need to learn and the amount of time you plan to devote each week to study.

Students will vary widely in the specific skills and information they need to learn. For example, some students may be highly knowledgeable in a particular subject matter and would not need to engage in new learning opportunities. Other students may find that portions of the program require them to learn new information and that they may need to take an online class or participate in a study module to acquire the knowledge and skills needed to pass the program competencies in that area. Some individuals may be able to devote as little as 15–20 hours per week to the program, while others may need to devote more time. For this reason, you will complete preassessments to help your program mentor form a profile of your prior knowledge and experience for use in creating your personalized Degree Plan.

WGU's Mentoring Approach

The mentoring approach is a powerful component of the WGU educational experience. When you enroll at WGU, you will begin interacting with your program mentor, course instructors, and other support staff. Your program mentor will meet with you on a regular basis and take an active role and a personal interest in your success. Your program mentor will be your point of contact throughout your program and will be available to communicate with you via e-mail or phone. Your program mentor will help you set weekly study goals, guide you to learning materials, help you understand what to expect in courses, and motivate you to work hard to complete your program. When you have questions or concerns, your program mentor will help you resolve them.

As you work on each course, you will also be assigned course instructors. These course instructors are content experts who can discuss your learning for the course, help you find answers to content questions, and help you navigate the course successfully. Your course instructors are available to meet with you individually to provide personal support. You can also communicate with them by posting in the online learning community and participating in live discussion sessions such as webinars and cohorts.

Working closely with your own personal mentoring team will help you engage in the learning process and be a successful student while at WGU.

Connecting with Other Mentors and Fellow Students

As you proceed through your Degree Plan, you will have direct contact with multiple faculty members. These communications can take a variety of forms, including participation in one-on-one discussions, chats in the learning communities, and live cohort and webinar opportunities. As a WGU student, you will have access to your own personal myWGU Student Portal, which will provide a gateway to your courses of study, learning resources, and learning communities where you will have interactions with faculty and other students.

The resources in each course are specifically designed to support you as you develop competencies in preparation for your assessments through the utilization of reading materials, videos, tutorials, cohort opportunities, community discussions, and live discussions that are guided by content experts. You will access your program community during your orientation course to network with peers who are enrolled in your program and to receive continued support through professional enrichment and program-specific chats, blogs, and discussions. WGU also provides Student Services Associates to help you and your program mentor solve any special problems that may arise.

Orientation

The WGU orientation course focuses on acquainting you with WGU's competency-based model, distance education, technology, and other resources and tools available for students. You will also utilize WGU program and course communities, participate in activities, and get to know other students at WGU. The orientation course must be completed before you can start your first term at WGU.

Transferability of Prior College Coursework

Because WGU is a competency-based institution, it does not award degrees based on credits but rather on demonstration of competency. However, if you have completed college coursework at another accredited institution, or if you have completed industry certifications, you may have your transcripts and certifications evaluated to determine if you are eligible to receive some transfer credit. The guidelines for determining what credits will be granted varies based on the degree program. Students entering graduate programs must have their undergraduate degree verified before being admitted to WGU. To review more information in regards to transfer guidelines based on the different degree programs, you may visit the Student Handbook found at the link below and search for "Transfer Credit Evaluation."

[Click here for the Student Handbook](#)

WGU does not waive any requirements based on a student's professional experience and does not perform a "résumé review" or "portfolio review" that will automatically waive any degree requirements. Degree requirements and transferability rules are subject to change in order to keep the degree content relevant and current.

Remember, WGU's competency-based approach lets you take advantage of your knowledge and skills, regardless of how you obtained them. Even when you do not directly receive credit, the knowledge you possess may help you accelerate the time it takes to complete your degree program.

Continuous Enrollment, On Time Progress, and Satisfactory Academic Progress

WGU is a "continuous enrollment" institution, which means you will be automatically enrolled in each of your new terms while you are at WGU. Each term is six months long. Longer terms and continuous enrollment allow you to focus on your studies without the hassle of unnatural breaks between terms that you would experience at a more traditional university. At the end of every six-month term, you and your student mentor will review the progress you have made and revise your Degree Plan for your next six-month term.

WGU requires that students make measurable progress toward the completion of their degree programs every term. We call this "On-Time Progress," denoting that you are on track and making progress toward on-time graduation. As full-time students, graduate students must enroll in at least eight (8) competency units each term, and undergraduate students must enroll in at least twelve (12) competency units each term. Completing at least these minimum enrollments is essential to On-Time Progress and serves as a baseline from which you may accelerate your program. We measure your progress based on the courses you are able to pass, not on your accumulation of credit hours or course grades. Every time

you pass a course you are demonstrating that you have mastered skills and knowledge in your degree program. For comparison to traditional grading systems, passing a course means you have demonstrated competency equivalent to a “B” grade or better.

WGU assigns competency units to each course in order to track your progress through the program. A competency unit is equivalent to one semester credit of learning. Some courses may be assigned 3 competency units while others may be as large as 12 competency units.

Satisfactory Academic Progress (SAP) is particularly important to students on financial aid because you must achieve SAP in order to maintain eligibility for financial aid. We will measure your SAP quantitatively by reviewing the number of competency units you have completed each term. In order to remain in good academic standing, you must complete at least 66.67% of the units you attempt over the length of your program—including any courses you add to your term to accelerate your progress. Additionally, during your first term at WGU you must pass at least 3 competency units in order to remain eligible for financial aid. We know that SAP is complex, so please contact a financial aid counselor should you have additional questions.

Courses

Your Degree Plan includes courses needed to complete your program. To obtain your degree, you will be required to demonstrate your skills and knowledge by completing the assessment(s) for each course. In general there are two types of assessments: performance assessments and objective assessments. Performance assessments contain, in most cases, multiple scored tasks such as projects, essays, and research papers. Objective assessments include multiple-choice items, multiple-selection items, matching, short answer, drag-and-drop, and point-and-click item types, as well as case study and video-based items. Certifications verified through third parties may also be included in your program. More detailed information about each assessment is provided in each course of study.

Learning Resources

WGU works with many different educational partners, including enterprises, publishers, training companies, and higher educational institutions, to provide high-quality and effective learning resources that match the competencies you’re developing. These vary in type, and may be combined to create the best learning experience for your course. A learning resource can be an e-textbook, online module, study guide, simulation, virtual lab, tutorial, or a combination of these. The cost of most learning resources are included in your tuition and Learning Resource Fee. They can be accessed or enrolled for through your courses. Some degree-specific resources are not covered by your tuition, and you will need to cover those costs separately. WGU also provides a robust library to help you obtain additional learning resources, as needed.

Mobile Compatibility:

The following article provides additional details about the current state of mobile compatibility for learning resources at WGU. It includes a list that can be referenced to determine the mobile friendliness of all core course materials used in a program.

[Student Handbook article: Can I use my mobile device for learning resources?](#)

Standard Path

As previously mentioned, competency units (CUs) have been assigned to each course in order to measure your academic progress. If you are an undergraduate student, you will be expected to enroll in a minimum of 12 competency units each term. Graduate students are expected to enroll in a minimum of 8 competency units each term. A standard plan for a student for this program who entered WGU without any transfer units would look similar to the one on the following page. Your personal progress can be faster, but your pace will be determined by the extent of your transfer units, your time commitment, and your determination to proceed at a faster rate.

Standard Path *for* Bachelor of Science, Network Operations and Security

Course Description	CUs	Term
Introduction to IT	4	1
Introduction to Communication	3	1
English Composition I	3	1
Critical Thinking and Logic	3	1
Intermediate Algebra	3	2
College Algebra	4	2
Integrated Physical Sciences	3	2
IT Foundations	4	2
IT Applications	4	3
Network and Security - Foundations	3	3
Natural Science Lab	2	3
Introduction to Humanities	3	3
Introduction to Probability and Statistics	3	4
English Composition II	3	4
Introduction to Biology	3	4
Scripting and Programming - Foundations	3	4
Networks	4	5
Spreadsheets	3	5
Introduction to Geography	3	5
Principles of Management	4	5
Organizational Behavior and Leadership	3	6
Network and Security - Applications	4	6
Business of IT - Applications	4	6
Data Management - Foundations	3	6
Linux Foundations	3	7
Web Development Foundations	3	7
Technical Communication	3	7
Fundamentals of Interconnecting Network Devices	6	7
Interconnecting Network Devices	6	8
Network Design Foundations	4	8
Business of IT - Project Management	4	8

Course Description	CUs	Term
Cloud Foundations	3	9
Designing Customized Security	6	9
Emerging Technologies	2	9
IT Capstone Written Project	4	9

Changes to Curriculum

WGU publishes an Institutional Catalog, which describes the academic requirements of each degree program. Although students are required to complete the program version current at the time of their enrollment, WGU may modify requirements and course offerings within that version of the program to maintain the currency and relevance of WGU's competencies and programs. As these changes are implemented, WGU will ensure that the length of the student's degree program (i.e., total competency unit requirements) will not increase and that competency units already earned will be applied to the updated program version. When program requirements are updated, students readmitting after withdrawal from the university will be expected to re-enter into the most current catalog version of the program.

Areas of Study for Bachelor of Science, Network Operations and Security

The following section includes the areas of study in the program, with their associated courses. Your specific learning resources and level of instructional support will vary based on the individual competencies you bring to the program and your confidence in developing the knowledge, skills, and abilities required in each area of the degree. The Degree Plan and learning resources are dynamic, so you need to review your Degree Plan and seek the advice of your mentor regarding the resources before you purchase them.

IT Fundamentals

Introduction to IT

Introduction to IT examines information technology as a discipline and the various roles and functions of the IT department as business support. Students are presented with various IT disciplines including systems and services, network and security, scripting and programming, data management, and business of IT, with a survey of technologies in every area and how they relate to each other and to the business.

This course covers the following competencies:

- *The graduate describes the structure, function, and security associated with networks.*
- *The graduate explains the structure and function of databases.*
- *The graduate describes IT as a discipline and discusses the history and future of computing as well as the currently used infrastructure.*
- *The graduate explains the role of technology in today's business environment and describes basic concepts of project management.*
- *The graduate identifies common software architectures, development techniques, and the relationship between software and its environment.*
- *The graduate describes information technology systems and their role in converting data to organizational knowledge.*
- *The graduate identifies the role of different types of software in a computing environment and explains the fundamentals of software development.*
- *The graduate evaluates ethical concerns involved in the use of technology.*
- *The graduate recognizes and describes functions of basic computer hardware components.*

IT Foundations

IT Foundations is the first course in a two-part series preparatory for the CompTIA A+ exam, Part I. Students will gain an understanding of personal computer components and their functions in a desktop system, as well as computer data storage and retrieval; classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers, laptops, portable devices, operating systems, networks, and system security; recommending appropriate tools, diagnostic procedures, preventative maintenance and troubleshooting techniques for personal computer components in a desktop system; strategies for identifying, preventing, and reporting safety hazards and environmental/human accidents in a technological environments; and effective communication with colleagues and clients as well as job-related professional behavior.

This course covers the following competencies:

- *The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, and upgrading basic network types.*
- *The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting laptops and mobile devices.*

- *The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers.*
- *The graduate demonstrates an understanding of personal computer components and their function in a desktop system.*
- *The graduate demonstrates a basic working knowledge of computer data storage and information retrieval.*

IT Applications

IT Applications is a continuation of the IT Foundations course preparatory for the CompTIA A+ exam, Part II. Students will gain an understanding of personal computer components and their functions in a desktop system. Also covered is computer data storage and retrieval, including classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers, laptops, portable devices, operating systems, networks, and system security. Other areas include recommending appropriate tools, diagnostic procedures, preventative maintenance and troubleshooting techniques for personal computer components in a desktop system. The course then finished with strategies for identifying, preventing, and reporting safety hazards and environmental/human accidents in a technological environments, and effective communication with colleagues and clients as well as job-related professional behavior.

This course covers the following competencies:

- *The graduate recommends appropriate strategies for classifying, controlling access, setting permission, configuring, optimizing, and upgrading basic system security.*
- *The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting laptops, tablets, and mobile devices.*
- *The graduate recommends appropriate strategies for classifying, installing, configuring, optimizing, upgrading, and troubleshooting computer operating systems.*
- *The graduate recommends appropriate tools, diagnostic procedures, preventive maintenance, and troubleshooting techniques for personal computer components in a desktop system.*

General Education

Introduction to Communication

This introductory communication course allows students to become familiar with the fundamental communication theories and practices necessary to engage in healthy professional and personal relationships. Students will survey human communication on multiple levels and critically apply the theoretical grounding of the course to interpersonal, intercultural, small group, and public presentational contexts. The course also encourages students to consider the influence of language, perception, culture, and media on their daily communicative interactions. In addition to theory, students will engage in the application of effective communication skills through systematically preparing and delivering an oral presentation. By practicing these fundamental skills in human communication, students become more competent communicators as they develop more flexible, useful, and discriminatory communicative practices in a variety of contexts.

This course covers the following competencies:

- *The graduate applies foundational elements of effective communication.*
- *The graduate applies appropriate communication strategies in interpersonal and group contexts*
- *The graduate utilizes appropriate presentational communication strategies in personal and professional settings.*

English Composition I

English Composition I introduces learners to the types of writing and thinking that are valued in college and beyond. Students will practice writing in several genres with emphasis placed on writing and revising academic arguments. Instruction and exercises in grammar, mechanics, research documentation, and style are paired with each module so that writers can practice these skills as necessary.

Comp I is a foundational course designed to help students prepare for success at the college level.

There are no prerequisites for English Composition I.

This course covers the following competencies:

- *The graduate integrates credible and relevant sources into written arguments.*
- *The graduate uses appropriate writing and revision strategies*
- *The graduate composes an appropriate argumentative essay for a given context.*
- *The graduate composes an appropriate narrative for a given context.*
- *The graduate appropriately uses a given writing style.*
- *The graduate selects appropriate rhetorical strategies that improve writing and argumentation.*
- *The graduate applies appropriate grammatical rules, sentence structure, and writing conventions.*

Critical Thinking and Logic

Reasoning and Problem Solving helps students internalize a systematic process for exploring issues that takes them beyond an unexamined point of view and encourages them to become more self-aware thinkers by applying principles of problem identification and clarification, planning and information gathering, identifying assumptions and values, analysis and interpretation of information and data, reaching well-founded conclusions, and identifying the role of critical thinking in the disciplines and professions.

This course covers the following competencies:

- *The graduate recognizes the value of critical thinking in identifying and understanding the underlying structures of the disciplines and professions.*
- *The graduate evaluates different sources representing a range of perspectives on a problem in order to weigh the implications and consequences of different solutions to the problem.*
- *The graduate synthesizes information to understand a problem's complexities and potential solutions, and then evaluates the reasoning and evidence in support of these different solutions.*
- *The graduate identifies internal and external biases and assumptions related to a problem, and evaluates the influence and validity of these biases and assumptions.*
- *The graduate logically brings together information to arrive at a viable solution to a problem, and then clearly and accurately communicates the results.*
- *The graduate analyzes open-ended problems by learning about the problem and evaluating the accuracy and relevance of different perspectives on the problem.*

Intermediate Algebra

This course provides an introduction of algebraic concepts and the development of the essential groundwork for College Algebra. Topics include: A review of basic mathematical skills, the real number system, algebraic expressions, linear equations, graphing, exponents and polynomials

This course covers the following competencies:

- *The graduate solves linear equations and applications.*
- *The graduate translates, simplifies, and evaluates algebraic expressions.*
- *The graduate determines absolute values, adds and subtracts integers, multiplies and divides real numbers, and determines whether or not a particular integer is a solution.*
- *The graduate graphs ordered pairs and lines on the Cartesian coordinate system.*
- *The graduate identifies, evaluates, and multiplies exponents and polynomials.*

College Algebra

This course provides further application and analysis of algebraic concepts and functions through mathematical modeling of real-world situations. Topics include: real numbers, algebraic expressions, equations and inequalities, graphs and functions, polynomial and rational functions, exponential and logarithmic functions, and systems of linear equations.

This course covers the following competencies:

- *The graduate simplifies and factors polynomial expressions, and solves polynomial equations.*
- *The graduate solves systems of linear equations and their related applications.*
- *The graduate simplifies rational, radical, and quadratic expressions, solves corresponding equations, and extends this knowledge to the study of functions.*
- *The graduate combines functions, finds inverse functions, solves exponential and logarithmic equations and functions.*
- *The graduate classifies and performs operations on real numbers; solves linear equations and inequalities; connects a linear equation to its graph; and identifies a function.*

Introduction to Humanities

This introductory humanities course allows students to practice essential writing, communication, and critical thinking skills necessary to engage in civic and professional interactions as mature, informed adults. Whether through studying literature, visual and performing arts, or philosophy, all humanities courses stress the need to form reasoned, analytical, and articulate responses to cultural and creative works. Studying a wide variety of creative works allows students to more effectively enter the global community with a broad and enlightened perspective.

This course covers the following competencies:

- *The graduate analyzes the primary contributions and characteristics of humanities during the Classical period.*
- *The graduate analyzes the primary contributions and characteristics of humanities during the Romantic period.*
- *The graduate assesses the development of humans through the study of key concepts, disciplines, and primary influences of the humanities.*
- *The graduate analyzes the primary contributions and characteristics of humanities during the Renaissance.*
- *The graduate analyzes the primary contributions and characteristics of humanities within the Neoclassical and Enlightenment period.*
- *The graduate analyzes the primary contributions and characteristics of humanities during the Realist movement.*

Introduction to Probability and Statistics

In this course, students demonstrate competency in the basic concepts, logic, and issues involved in statistical reasoning. Topics include summarizing and analyzing data, sampling and study design, and probability.

This course covers the following competencies:

- *The graduate applies theoretical or empirical probability to a situation to quantify uncertainty.*
- *The graduate evaluates the sampling methods used in studies including the effect they have on conclusions that can be made.*
- *The graduate evaluates the relationship between two variables through the creation and interpretation of numerical summaries and visual displays.*
- *The graduate determines the probability of events using simulations, diagrams, and probability rules.*
- *The graduate evaluates categorical and quantitative data using appropriate numerical measures and graphical displays.*
- *The graduate designs and conducts observational studies, controlled experiments, and surveys to explore population characteristics.*

English Composition II

English Composition II introduces undergraduate students to research writing. It is a foundational course designed to help students prepare for advanced writing within the discipline and to complete the capstone. Specifically, this course will help students develop or improve research, reference citation, document organization, and writing skills. English Composition I or equivalent is a prerequisite for this course.

This course covers the following competencies:

- *The graduate applies steps of the writing process appropriately to improve quality of writing.*
- *The graduate composes an argumentative research paper.*
- *The graduate evaluates the quality, credibility, and relevance of evidence in order to integrate evidence into a final research paper.*

Introduction to Geography

This course will discuss geographic concepts, places and regions, physical and human systems and the environment.

This course covers the following competencies:

- *The graduate can describe and discuss fundamental concepts in geography.*
- *The graduate can describe and discuss environment.*
- *The graduate can describe and discuss human systems.*
- *The graduate can describe and discuss physical systems.*
- *The graduate can describe and discuss places and regions.*

General Science Content

Integrated Physical Sciences

This course provides students with an overview of the basic principles and unifying ideas of the physical sciences: physics, chemistry, and Earth sciences. Course materials focus on scientific reasoning and practical and everyday applications of physical science concepts to help students integrate conceptual knowledge with practical skills.

This course covers the following competencies:

- *The graduate describes the underlying organization, interactions, and processes within the Earth system including the Earth's structure and atmosphere, and Earth's interactions within the solar system.*
- *The graduate describes the nature and process of science.*
- *The graduate examines applications of physics including fundamental concepts such as forces, motion, energy, and waves.*
- *The graduate examines applications of key chemistry concepts including the structure of matter and the behavior and conservation of matter in chemical reactions.*

Natural Science Lab

This course gives you an introduction to using the scientific method and engaging in scientific research to reach conclusions about the natural world. You will design and carry out an experiment to investigate a hypothesis by gathering quantitative data.

This course covers the following competencies:

- *The graduate accurately executes the process of scientific inquiry through experimentation in the natural world.*
- *The graduate draws conclusions based on academic research and scientific inquiry.*
- *The graduate evaluates academic sources for their credibility and relevance to a chosen research topic on a natural world phenomenon.*

Introduction to Biology

This course is a foundational introduction to the biological sciences. The overarching theories of life from biological research are explored as well as the fundamental concepts and principles of the study of living organisms and their interaction with the environment. Key concepts include how living organisms use and produce energy; how life grows, develops, and reproduces; how life responds to the environment to maintain internal stability; and how life evolves and adapts to the environment.

This course covers the following competencies:

- *The graduate analyzes interdependencies of organisms and their environments.*
- *The graduate analyzes the characteristics and classification of living organisms.*
- *The graduate analyzes different types of cells based on their structures and biological functions.*
- *The graduate analyzes the basic chemical composition of cells and the basic processes that happen at the cellular level.*
- *The graduate analyzes the biological basis for and patterns of heredity and gene expression.*

Network and Security

Network and Security - Foundations

Network and Security - Foundations introduces students to the components of a computer network and the concept and role of communication protocols. The course covers widely used categorical classifications of networks (e.g., LAN, MAN, WAN, WLAN, PAN, SAN, CAN, and VPN) as well as network topologies, physical devices, and layered abstraction. The course also introduces students to basic concepts of security covering vulnerabilities of networks and mitigation techniques, security of physical media, and security policies and procedures. This course has no prerequisites.

This course covers the following competencies:

- *The graduate identifies network security concepts to support security practices within an organization.*
- *The graduate determines appropriate network security operations to protect an organization's assets and networks.*
- *The graduate identifies core networking concepts to support networking operations within an organization.*

Networks

Networks for undergraduates focuses on the general concepts and applications of computer operating systems and network topologies. The fundamental knowledge and skills gained in this course prepares students for the CompTIA Network+ (N10-007) certification exam. C172 is a pre-requisite for this course, and should be completed prior to beginning Networks, C480.

This course covers the following competencies:

- *The graduate troubleshoots network issues in support of an organization's operations.*
- *The graduate manages network security to protect an organization.*
- *The graduate manages networks to support an organization's operations.*
- *The graduate configures basic networking components to support an organization's operations.*
- *The graduate manages a network infrastructure to support an organization's operations.*

Network and Security - Applications

Network and Security - Applications prepares students for the CompTIA Security+ certification exam. Successfully completing the course ensures the student will demonstrate the knowledge and skills required to install and configure systems to secure applications, networks, and devices; perform threat analysis and respond with appropriate mitigation techniques; participate in risk mitigation activities; and operate with an awareness of applicable policies, laws, and

regulations. The following course is a prerequisite: C480 Networks

This course covers the following competencies:

- *The graduate configures network hardware and software to support organizational security.*
- *The graduate implements secure system design to secure organization networks.*
- *The graduate executes data security and privacy practices to manage organizational risk.*
- *The graduate manages security settings to secure organization networks.*
- *The graduate examines the impact of threats, attacks, and vulnerabilities to organizational security.*
- *The graduate executes identity and access management controls to prevent unauthorized access to organizational resources.*

Linux Foundations

Linux Foundations is an introduction to Linux as an operating system as well as an introduction to open source concepts and the basics of the Linux command line. Expert content, a Linux virtual machine, and step-by-step labs give you hands-on access to practice Linux command line concepts. Linux is widely used in different industries for all kinds of functions including web servers, firewalls, and graphic design, and provides robust functionality and a stable, secure environment that is not often found in any other client operating system.

This course covers the following competencies:

- *The graduate manages the system using command line basics.*
- *The graduate configures the system using advanced commands.*
- *The graduate configures security and file permissions.*
- *The graduate identifies major Linux distributions, features, and requirements.*
- *The graduate identifies the fundamentals of open source software.*

Cloud Foundations

More and more companies are shifting to a cloud computing model of doing business. The Cloud Foundations course focuses on the real-world issues and practical solutions of cloud computing in business and IT. Competency in this course will be demonstrated by the successful completion of the CompTIA Cloud Essentials certification exam.

This course covers the following competencies:

- *The graduate analyzes characteristics of cloud services.*
- *The graduate outlines the steps to successful adoption of cloud services.*
- *The graduate evaluates the risks involved in the use of cloud services.*
- *The graduate assesses the impact of cloud computing on IT service management.*
- *The graduate outlines types of cloud computing, the associated risks, and technical impact.*
- *The graduate explains how cloud computing impacts business value.*

Emerging Technologies

The Emerging Technology course examines emerging technologies, identifies the benefits and drawbacks of technology adoption, and provides students with a process to evaluate technologies. The course will examine three technologies that may have an impact on Information Technology services in the coming years.

This course covers the following competencies:

- *The graduate evaluates technology for organizations improvement.*
- *The graduate determines the impact of a proposed technology on an organization.*

Scripting and Programming

Scripting and Programming - Foundations

Scripting and Programming - Foundations provides an introduction to programming, covering basic elements such as variables, data types, flow control, and design concepts. The course is language-agnostic in nature, ending in a survey of languages and introduces the distinction between interpreted and compiled languages. There are no prerequisites for this course.

This course covers the following competencies:

- *The graduate examines basic computer programming elements, including data types, constants, variables, operators, and expressions.*
- *The graduate compares various scripting and programming languages.*
- *The graduate interprets algorithms.*
- *The graduate describes steps of the software design process.*
- *The graduate determines how to achieve programming goals through functions and control structure.*

Spreadsheets

Spreadsheets

The Spreadsheets course will help students become proficient in using spreadsheets to analyze business problems. Students will demonstrate competency in spreadsheet development and analysis for business/accounting applications (e.g., using essential spreadsheet functions, formulas, charts, etc.)

This course covers the following competencies:

- *The graduate creates charts to present spreadsheet data for use in a professional setting.*
- *The graduate creates functional, formatted spreadsheets using appropriate spreadsheet functions and formulas to solve business problems.*
- *The graduate demonstrates proficiency in using spreadsheet software to analyze business problems.*

Leadership and Management

Principles of Management

This course addresses strategic planning, total quality, entrepreneurship, conflict and change, human resource management, diversity, and organizational structure.

This course covers the following competencies:

- *The graduate can recommend an organizational structure to match a given organization's situation.*
- *The graduate can recommend effective techniques for managing conflict and change.*
- *The graduate can describe how to establish and promote an entrepreneurial emphasis within an organization.*
- *The graduate can correctly apply principles of human resource management in a given situation.*
- *The graduate responds appropriately to diversity issues in the workplace.*
- *The graduate can explain the strategic planning process.*
- *The graduate can describe how to establish a total quality management program in a product operation and in a service operation.*

Organizational Behavior and Leadership

Organizational Behavior and Leadership explores how to lead and manage effectively in diverse business environments. Students are asked to demonstrate the ability to apply organizational leadership theories and management strategies in a series of scenario-based problems.

This course covers the following competencies:

- *The graduate can describe the effects of specified influences on individual behavior.*
- *The graduate can analyze leadership theories, methods, and tools in given situations and select the appropriate behavior of the leader.*
- *The graduate can develop and recommend how to implement effective performance evaluation processes.*
- *The graduate can determine which type of team and team leadership should be used to accomplish a task or project.*
- *The graduate analyzes the culture within an organization to determine how to work effectively within that organization.*
- *The graduate can recommend appropriate principles or techniques for guiding the development of a group.*

Business of IT

Business of IT - Applications

Business of IT – Applications examines Information Technology Infrastructure Library (ITIL®) terminology, structure, policies, and concepts. Focusing on the management of Information Technology (IT) infrastructure, development, and operations, students will explore the core principles of ITIL practices for service management to prepare them for careers as IT professionals, business managers, and business process owners. This course has no prerequisites.

This course covers the following competencies:

- *The graduate analyzes service management processes and the process model in order to effectively deliver IT services to customers.*
- *The graduate describes the various processes central to IT service management in order to contextualize each process within an organization's overarching service management approach.*
- *The graduate analyzes how the ITIL Service Lifecycle's integrated approach provides value to organizations in order to work effectively on IT teams.*
- *The graduate describes the service desk function, the technical management function, the application management function, and the IT operations management function in order to contextualize each function within an organization's overarching service management approach.*
- *The graduate deconstructs service management, service design, and continual service improvement in order to optimize service value for customers and organizations.*
- *The graduate analyzes how different roles and responsible, accountable, consulted, and informed characterizations work together in order to understand the opportunities and constraints the graduate is likely to experience when working on teams in a service management workplace.*
- *The graduate articulates service management concepts with ITIL vocabulary in order to effectively communicate about IT service management in the workplace.*

Business of IT - Project Management

In this course, students will build on industry standard concepts, techniques, and processes to develop a comprehensive foundation for project management activities. During a project's life cycle, students will develop the critical skills necessary to initiate, plan, execute, monitor, control, and close a project. Students will apply best practices in areas such as scope management, resource allocation, project planning, project scheduling, quality control, risk management, performance measurement, and project reporting. This course prepares students for the following certification exam: CompTIA Project+.

This course covers the following competencies:

- *The graduate determines project tools and documentation methods to measure and monitor project performance.*
- *The graduate applies communication methods and change control processes to maintain clarity of project plans, activities, and changes for stakeholders.*
- *The graduate determines the impact of project constraints and influences to manage risk.*
- *The graduate applies key project management processes to guide business initiatives.*

Data Management

Data Management - Foundations

This course introduces students to the concepts and terminology used in the field of data management. They will be introduced to Structured Query Language (SQL) and will learn how to use Data Definition Language (DDL) and Data Manipulation Language (DML) commands to define, retrieve, and manipulate data. This course covers differentiations of data—structured vs. unstructured and quasi-structured (relational, hierarchical, XML, textual, visual, etc); it also covers aspects of data management (quality, policy, storage methodologies). Foundational concepts of data security are included.

This course covers the following competencies:

- *The graduate explains how data, databases, and data management are used in today's organizations.*
- *The graduate analyzes the relational model of data.*
- *The graduate interprets the concepts of analytical processing within the context of business intelligence.*
- *The graduate implements SQL concepts and coding.*
- *The graduate demonstrates appropriate strategies to normalize data.*
- *The graduate demonstrates an understanding of the concepts involved in the modeling of data.*

Web Development

Web Development Foundations

This course prepares students for the CIW Site Development Associate certification. The course introduces students to web design and development by presenting them with HTML5 and CSS, the foundational languages of the web, by reviewing media strategies, and by using tools and techniques commonly employed in web development.

This course covers the following competencies:

- *The graduate develops a plan for creating and maintaining a website that addresses specific business needs while maintaining industry and ethical standards.*
- *The graduate creates web pages using a GUI editor as well as basic HTML5 and CSS 3 elements.*

Technical Communication

Technical Communication

This course covers basic elements of technical communication, including professional written communication proficiency; the ability to strategize approaches for differing audiences; and technical style, grammar, and syntax proficiency.

This course covers the following competencies:

- *The graduate creates various technically written artifacts using appropriate technical communication concepts.*
- *The graduate integrates basic elements of technical communication, including audience analysis, the writing process, correct grammar, and appropriate design elements.*

- *The graduate makes strategic and appropriate communication decisions based on the audience.*

Interconnecting Network Devices

Fundamentals of Interconnecting Network Devices

This course prepares students for the Cisco CCENT certification exam, Interconnecting Cisco Networking Devices Part I (ICND1). This is also the first of two exams that lead to Cisco Certified Networking Associate (CCNA) certification.

This course covers the following competencies:

- *The graduate distinguishes and explains network topologies, including protocols, ports, addressing schemes, routing, and wireless communication standards.*
- *The graduate differentiates and explains network security devices and methods for troubleshooting common security threats.*
- *The graduate differentiates and installs/configures network devices.*
- *The graduate identifies appropriate methodologies for troubleshooting network connectivity and performance issues in a given network environment.*
- *The graduate differentiates and explains physical and logical topologies, including wiring standards.*
- *The graduate uses hardware and software utilities to track and maintain network performance in optimized state.*

Interconnecting Network Devices

This course prepares students for the second Cisco CCNA certification exam, Interconnecting Cisco Networking Devices Part 2 (ICND2).

This course covers the following competencies:

- *The graduate distinguishes and explains network topologies, including protocols, ports, addressing schemes, routing, and wireless communication standards.*
- *The graduate differentiates and explains network security devices and methods for troubleshooting common security threats.*
- *The graduate differentiates and installs/configures network devices.*
- *The graduate identifies appropriate methodologies for troubleshooting network connectivity and performance issues in a given network environment.*
- *The graduate differentiates and explains physical and logical topologies, including wiring standards.*
- *The graduate uses hardware and software utilities to track and maintain network performance in optimized state.*

Networking

Network Design Foundations

Network Design Foundations explores enterprise environments that require networks designed for performance, availability, and scalability with the flexibility to meet rapidly evolving demands. Skilled IT professionals who possess up-to-date, fundamental network design skills are needed in order to meet these challenges head-on. C246: Fundamentals of Interconnecting Network Devices or Cisco Certified Entry Networking Technician (CCENT) certification is a prerequisite for this course.

This course covers the following competencies:

- *The graduate recognizes the impact of expanding existing architecture to ensure network functionality.*
- *The graduate explains how to apply design objectives to ensure a network design meets the needs of an organization.*

- *The graduate designs an IP routing architecture to ensure network functionality and provide future expansion for summarization, scalability, and convergence requirements.*
- *The graduate compares design methodologies to determine which methodology will meet the needs of the organization.*
- *The graduate designs basic, enterprise, and branch networks to meet the needs of an organization.*

Security

Designing Customized Security

The course provides an introduction to the core security concepts and skills needed for the installation, monitoring, and troubleshooting of network security features to maintain the integrity, confidentiality, and availability of data and devices. Successfully completing this course will certify these skills. You will also develop competency in the technologies that Cisco uses in its security infrastructure. Recommended Experience: You should possess a current Cisco Certified Network Administrator in Routing and Switching certification.

This course covers the following competencies:

- *The graduate creates physical designs for network infrastructure security.*
- *The graduate designs access control strategies for various types of data.*
- *The graduate creates physical designs for client infrastructure security.*
- *The graduate identifies technical and security issues and creates conceptual designs for network infrastructure security.*
- *The graduate creates logical conceptual designs for network infrastructure security.*

Capstone

IT Capstone Written Project

The capstone project consists of a technical work proposal, the proposal's implementation, and a post-implementation report that describes the graduate's experience in developing and implementing the capstone project. The capstone project should be presented and approved by the mentor in relation to the graduate's technical emphasis.

This course covers the following competencies:

- *The graduate integrates and synthesizes competencies from across the degree program, thereby demonstrating the ability to participate in and contribute value to the chosen professional field.*

Need More Information? WGU Student Services

WGU's Student Services team is dedicated exclusively to helping you achieve your academic goals. The Student Services office is available during extended hours to assist with general questions and administrative or accessibility issues. The Student Services team members help you resolve issues, listen to student issues and concerns, and make recommendations for improving policy and practice based on student feedback. The Student Services team provides a formal means by which you can express your views, which in turn will inform the decisions we make.

Student Services team members also assist with unresolved concerns to find equitable resolutions. To contact the Student Services team, please feel free to call 877-435-7948 or e-mail studentservices@wgu.edu. We are available Monday through Friday from 6:00 a.m. to 10:00 p.m., Saturday from 7:00 a.m. to 7:00 p.m., mountain standard time. Closed Sundays.

If you have inquiries or concerns that require technical support, please contact the WGU IT Service Desk. The IT Service Desk is available Monday through Friday, 6:00 a.m. to 10:00 p.m. and Saturday and Sunday, 10:00 a.m. to 7:00 p.m., mountain standard time. To contact the IT Service Desk, please call 1-877-HELP-WGU (877-435-7948) or e-mail servicedesk@wgu.edu. The support teams are generally closed in observance of university holidays.

For the most current information regarding WGU support services, please visit "Student Support" on the Student Portal at <http://my.wgu.edu>.
